

Botho University Fee Structure for Programmes in Campus Learning mode of study - Botswana

Most of Botho University programmes follow a credit-based tuition fee structure. Every programme consists of modules worth a specific number of credits. The number of credits for any module is available on www.bothouniversity.com under each programme. 60 credits per semester is normal full-time load. The tuition fee for a module for credit-based programmes is thus obtained by multiplying the module credits by the fee per credit (for e.g.: - if the module is 10 credits the fees payable per module for an Undergraduate programme will be $10 \times 420 = P4200$). The tuition fee for a programme can thus be obtained by adding the fees for all the modules, calculated as explained earlier.

 Leadership Passmore Musungwa Matupire, 2016-10-04 The four worlds as we know them today the North West South and
 East are out of balance The West and the North generally dominate on a global scale while the South and the East lag behind
 This also happens at individual societal and organisational levels It is clear that there is a need to change the way we lead
 our organisations in business and the way we think about leading in politics Here is a comprehensive exploration of the
 Integral Leadership challenges of the twenty first century The author combines the African philosophy of Ubuntu or
 humanness the cornerstone of African thought and life with the concept of Integral Leadership with particular reference to
 Lessen and Schieffer's combining in their 2010 book Integral Research and Innovation of nature and community culture and
 spirituality science and technology and politics and economies This connectedness in the new paradigm of wholeness and
 relatedness goes beyond the relationships of human beings alone and involves experiences with nature and community
 Leadership is viewed from an indigenous and exogenous perspective bringing together a newly Integral approach which will
 also introduce industry ecology and knowledge ecology as an evolution of the Ubuntu philosophy The author offers a unique
 forum through which to commit to paper the operationalisation of the Integral Ubuntu Leadership model in catalysing
 development efforts and in CARE ing for communities and societies Genetics and Molecular Biology of Anaerobic
 Bacteria Madeleine Sebald, 2012-12-06 The field of bacterial genetics has been restricted for many years to Escherichia coli
 and a few other genera of aerobic or facultatively anaerobic bacteria such as Pseudomonas Bacillus and Salmonella The
 prevailing view up to recent times has been that anaerobic bacteria are interesting organisms but nothing is known about
 their genetics To most microbiologists anaerobic bacteria appeared as a sort of distant domain reserved for occasional
 intrusions by taxonomists and medical microbiologists By the mid 1970s knowledge of the genetics and molecular biology of
 anaerobes began to emerge and then developed rapidly but also in This was the result of advances in molecular biology
 techniques portantly because of improvements in basic techniques for culturing anaerobes and for understanding their
 biochemistry and other areas of interest Investigations in this field were also stimulated by a renewal of interest in their

ecology their role in pathology and in biotransformations and in the search for alternative renewable sources of energy The initial idea for this book came from Thomas D Brock When Dr Brock requested my opinion about two years ago on the feasibility of publishing a book on the genetics of anaerobic bacteria as a part of the Brock Springer Series in Contemporary Bioscience I answered positively but I was apprehensive about assuming the role of editor However I was soon reassured by the enthusiastic commitment of those I approached to contribute Eventually thanks to the caring cooperation of the contributors the task became relatively easy
