Papers for teachers, 1880 Recent Progress in General Topology III K.P. Hart, J. van Mill, P. Simon, 2013-12-11 The book presents surveys describing recent developments in most of the primary subfields of General Topology and its applications to Algebra and Analysis during the last decade following the previous editions North Holland 1992 and 2002 The book was prepared in connection with the Prague Topological Symposium held in 2011 During the last 10 years the focus in General Topology changed and therefore the selection of topics differs from that chosen in 2002 The following areas experienced significant developments Fractals Coarse Geometry Topology Dimension Theory Set Theoretic Topology and Dynamical Systems *Algebraic Methodology and Software Technology* Helene Kirchner, Christophe Ringeissen, 2002-08-26 This volume contains the proceedings of AMAST 2002 the 9th International Conference on Algebraic Methodology and Software Technology held during September 9-13 2002 in Saint Gilles les Bains Réunion Island France The major goal of the AMAST conferences is to promote research that may lead to setting software technology on a firm mathematical basis This goal is achieved through a large international cooperation with contributions from both academia and industry Developing a software technology on a mathematical basis produces software that is a correct and the correctness can be proved mathematically safe so that it can be used in the implementation of critical systems portable i.e. independent of computing platforms and language generations evolutionary i.e. it is self adaptable and evolves with the problem domain All previous AMAST conferences which were held in Iowa City 1989 1991 Twente 1993 Montreal 1995 Munich 1996 Sydney 1997 Manaus 1999 and Iowa City 2000 made contributions to the AMAST goals by reporting and disseminating academic and industrial achievements within the AMAST area of interest During these meetings AMAST attracted an international following among researchers and practitioners interested in software technology programming methodology and their algebraic and logical foundations **Homotopy of Operads and Grothendieck-Teichmüller Groups** Benoit Fresse, 2017-04-21 The Grothendieck-Teichmüller group was defined by Drinfeld in quantum group theory with insights coming from the Grothendieck program in Galois theory The ultimate goal of this book is to explain that this group has a topological interpretation as a group of homotopy automorphisms associated to the operad of little 2-discs which is an object used to model commutative homotopy structures in topology This volume gives a comprehensive survey on the algebraic aspects of this subject The book explains the definition of an operad in a general context reviews the definition of the little-discs operad and explains the definition of the Grothendieck-Teichmüller group from the viewpoint of the theory of operads In the course of this study the relationship between the little-discs operad and the definition of universal operations associated to braided monoidal category structures is explained Also provided is a comprehensive and self-contained survey of the applications of Hopf algebras to the definition of a rationalization process the Malcev completion for groups and groupoids Most definitions are carefully reviewed in the book it requires minimal prerequisites to be accessible to a broad readership of

graduate students and researchers interested in the applications of operads **Mixed Integer Nonlinear Programming**

Jon Lee, Sven Leyffer, 2011-12-02 Many engineering operations and scientific applications include a mixture of discrete and continuous decision variables and nonlinear relationships involving the decision variables that have a pronounced effect on the set of feasible and optimal solutions Mixed integer nonlinear programming MINLP problems combine the numerical difficulties of handling nonlinear functions with the challenge of optimizing in the context of nonconvex functions and discrete variables MINLP is one of the most flexible modeling paradigms available for optimization but because its scope is so broad in the most general cases it is hopelessly intractable Nonetheless an expanding body of researchers and practitioners including chemical engineers operations researchers industrial engineers mechanical engineers economists statisticians computer scientists operations managers and mathematical programmers are interested in solving large scale MINLP instances **Multi-Agent Systems and Applications**

Michael Luck, 2001-06-20 This book presents selected tutorial lectures given at the summer school on Multi Agent Systems and Their Applications held in Prague Czech Republic in July 2001 under the sponsorship of ECCAI and Agent Link The 20 lectures by leading researchers in the field presented in the book give a competent state of the art account of research and development in the field of multi agent systems and advanced applications The book offers parts on foundations of MAS social behaviour meta reasoning and learning and applications

Modeling Biological Systems James W. Haefner, 2012-12-06 This book is intended as a text for a first course on creating and analyzing computer simulation models of biological systems The expected audience for this book are students wishing to use dynamic models to interpret real data much as they would use standard statistical techniques It is meant to provide both the essential principles as well as the details and equations applicable to a few particular systems and subdisciplines Biological systems however encompass a vast diverse array of topics and problems This book discusses only a select number of these that I have found to be useful and interesting to biologists just beginning their appreciation of computer simulation The examples chosen span classical mathematical models of well studied systems to state of the art topics such as cellular automata and artificial life I have stressed the relationship between the models and the biology over mathematical analysis in order to give the reader a sense that mathematical models really are useful to biologists In this light I have sought examples that address fundamental and I think interesting biological questions Almost all of the models are directly compared to quantitative data to provide at least a partial demonstration that some biological models can accurately predict **Solving**

Polynomial Equations Alicia Dickenstein, 2005-04-27 This book provides a general introduction to modern mathematical aspects in computing with multivariate polynomials and in solving algebraic systems It presents the state of the art in several symbolic numeric and symbolic numeric techniques including effective and algorithmic methods in algebraic geometry and computational algebra complexity issues and applications ranging from statistics and geometric modelling to robotics and vision Graduate students as well as researchers in related areas will find an excellent introduction to currently interesting

topics These cover Groebner and border bases multivariate resultants residues primary decomposition multivariate polynomial factorization homotopy continuation complexity issues and their applications

The Geometry of Cubic Hypersurfaces Daniel Huybrechts, 2023-06-29 Cubic hypersurfaces are described by almost the simplest possible polynomial equations yet their behaviour is rich enough to demonstrate many of the central challenges in algebraic geometry With exercises and detailed references to the wider literature this thorough text introduces cubic hypersurfaces and all the techniques needed to study them The book starts by laying the foundations for the study of cubic hypersurfaces and of many other algebraic varieties covering cohomology and Hodge theory of hypersurfaces moduli spaces of those and Fano varieties of linear subspaces contained in hypersurfaces The next three chapters examine the general machinery applied to cubic hypersurfaces of dimension two three and four Finally the author looks at cubic hypersurfaces from a categorical point of view and describes motivic features Based on the author's lecture courses this is an ideal text for graduate students as well as an invaluable reference for researchers in algebraic geometry

Isomorphism Conjectures in K - and L -Theory Wolfgang Lück, 2025-09-30 This monograph is devoted to the Isomorphism Conjectures formulated by Baum and Connes and by Farrell and Jones These conjectures are central to the study of the topological K theory of reduced group C algebras and the algebraic K and L theory of group rings They have far reaching applications in algebra geometry group theory operator theory and topology The book provides a detailed account of the development of these conjectures their current status methods of proof and their wide ranging implications These conjectures are not only powerful tools for concrete computations but also play a crucial role in proving other major conjectures Among these are the Borel Conjecture on the topological rigidity of aspherical closed manifolds the stable Gromov Lawson Rosenberg Conjecture on the existence of Riemannian metrics with positive scalar curvature on closed Spin manifolds Kaplansky's Idempotent Conjecture and the related Kadison Conjecture the Novikov Conjecture on the homotopy invariance of higher signatures and conjectures concerning the vanishing of the reduced projective class group and the Whitehead group of torsionfree groups
