Computational Design Rongrong Yu, Ning Gu, Michael J. Ostwald, 2021-07-25 New computational design tools have evolved rapidly and been increasingly applied in the field of design in recent years complementing and even replacing the traditional design media and approaches Design as both the process and product are changing due to the emergence and adoption of these new technologies Understanding and assessing the impact of these new computational design environments on design and designers is important for advancing design in the contemporary context Do these new computational environments support or hinder design creativity How do those tools facilitate designers thinking Such knowledge is also important for the future development of design technologies Research shows that design is never a mysterious non understandable process for example one general view is that design process shares a common analysis synthesis evaluation model during which designers interact between design problem and solution spaces Understanding designers thinking in different environments is the key to design research education and practice This book focuses on emerging computational design environments whose impact on design and designers have not been comprehensively and systematically studied It comprises three parts The history and recent developments of computational design technologies are introduced in Part I The main categories of technologies cover from computer aided drafting and modelling tools to visual programming and scripting tools for algorithmic design to advanced interfaces and platforms for interactions between designers between designers and computers and between the virtual environment and the physical reality To critically explore design thinking especially in these new computational design environments formal approaches to studying design thinking and design cognition are introduced and compared in Part II drawing on literature and studies from the 70s to the current era Part III concludes the book by exploring the impact of different computational design technologies on design and designers using a series of case studies conducted by the author team building on their close collaboration over the past five years The book offers new insights into designers thinking in the rapidly evolving computational design environments which have not been critically and systematically studied and reported in the current literature The book is meant for design researchers educators and students professional practitioners and consultants as well as people who are interested in computational design in general

Tripping on Utopia Benjamin Breen, 2024-04-25 It was not the Baby Boomers who ushered in the first era of widespread drug experimentation It was their parents The generation that survived the second World War emerged with a profoundly ambitious sense of social experimentation In the 40s and 50s transformative drugs rapidly entered mainstream culture where they were not only legal but openly celebrated American physician John C Lilly infamously dosed dolphins and himself with LSD in a NASA funded effort to teach dolphins to talk A tripping Cary Grant mumbled into a Dictaphone about Hegel as astronaut John Glenn returned to Earth At the centre of this revolution were the pioneering anthropologists and star crossed lovers Margaret Mead and Gregory Bateson Convinced the world was headed

toward certain disaster Mead and Bateson made it their life's mission to reshape humanity through a new science of consciousness expansion but soon found themselves at odds with the government bodies who funded their work whose intentions were less than pure Mead and Bateson's partnership unlocks an untold chapter in the history of the twentieth century linking drug researchers with CIA agents outsider sexologists and the founders of the Information Age *Detention in Non-international Armed Conflict* Lawrence Hill-Cawthorne, 2016 International law has long differentiated between international and non international armed conflicts traditionally regulating the former far more comprehensively than the latter This is particularly stark in the case of detention where the law of non international armed conflict contains no rules on who may be detained what processes must be provided to review their detention and when they must be released Given that non international armed conflicts are now the most common form of conflict this is especially worrying and the consequences of this have been seen in the detention practices of states such as the US and UK in Iraq and Afghanistan This book provides a comprehensive examination of the procedural rules that apply to detention in non international armed conflict with the focus on preventive security detention or internment All relevant areas of international law most notably international humanitarian law and international human rights law are analysed in detail and the interaction between them explored The book gives an original account of the relationship between the relevant rules of IHL and IHRL which is firmly grounded in general international law scholarship treating the issue as a matter of treaty interpretation With that in mind and with reference to State practice in specific non international armed conflicts including those in Sri Lanka Colombia Nepal Afghanistan and Iraq it is demonstrated that the customary and treaty obligations of States under human rights law continue absent derogation to apply to detention in non international armed conflicts The practical operation of those rules is then explored in detail The volume ends with a set of concrete proposals for developing the law in this area in a manner that builds upon rather than replaces the existing obligations of States and non State armed groups *Commerce Business Daily*, 2000-03 **New Realities** Roy Ascott, Gerald Bast, Wolfgang Fiel, 2008 Accompanying DVD ROM entitled CR9 Ambience DVD contains over 25 hours of video material accessible and navigable featuring speeches discussions and panels as well as text introductions P 343 **Then and Now** Marianne Evans, 2015-07-01 Aiden Balfour has always craved stability independence and security He's led a rocky life but always treasured his summers in Northern Michigan with his best summertime friend Olivia Masters Olivia is dedicated to preserving the life she's known and has always treasured at her grandparent's home high on a bluff overlooking the pristine waters of Avalon With their blessing she's turned the expansive piece of property into a quaint restful bed and breakfast But developers are circling and they're led by none other than Aiden Balfour Now an ambitious businessman he's determined to turn the lake into a tourist mecca Olivia is equally determined to stop him no matter what his hold on her heart Can the innocent joy and love of their youth be reclaimed Can then and now ever be reconciled to a future overflowing with love and hope *Racism and Borders* Jeff Shantz, 2010 Despite claims about

globalization we see increasing surveillance tightened restrictions and growing punitive regimes at international borders This critical collection examines processes of racialization in relation to border regulations and restrictions It analyses border controls racism and representations of race within multinational contexts as aspects of neo liberal governance It also looks at means by which people resist or challenge racialization This collection uses the lenses of sociology criminology art literary criticism and political science to critically examine varied processes of racialization criminalization and resistance in relation to borders with reference to multi national contexts in the current period a a *Choice* ,2009 The Routledge Handbook of Memory Activism Yifat Gutman,Jenny Wüstenberg,2023-02-15 This Handbook is the first systematic effort to map the fast growing phenomenon of memory activism and to delineate a new field of research that lies at the intersection of memory and social movement studies From Charlottesville to Cape Town from Santiago to Sydney we have recently witnessed protesters demanding that symbols of racist or colonial pasts be dismantled and that we talk about histories that have long been silenced But such events are only the most visible instances of grassroots efforts to influence the meaning of the past in the present Made up of more than 80 chapters that encapsulate the rich diversity of scholarship and practice of memory activism by assembling different disciplinary traditions methodological approaches and empirical evidence from across the globe this Handbook establishes important questions and their theoretical implications arising from the social political and economic reality of memory activism Memory activism is multifaceted takes place in a variety of settings and has diverse outcomes but it is always crucial to understanding the constitution and transformation of our societies past and present This volume will serve as a guide and establish new analytic frameworks for scholars students policymakers journalists and activists alike
