*Optimization of Pharmaceutical R&D Programs and Portfolios* Zoran Antonijevic,2014-10-10 Very little has been published on optimization of pharmaceutical portfolios Moreover most of published literature is coming from the commercial side where probability of technical success PoS is treated as fixed and not as a consequence of development strategy or design In this book there is a strong focus on impact of study design on PoS and ultimately on the value of portfolio Design options that are discussed in different chapters are dose selection strategies adaptive design and enrichment Some development strategies that are discussed are indication sequencing optimal number of programs and optimal decision criteria This book includes chapters written by authors with very broad backgrounds including financial clinical statistical decision sciences commercial and regulatory Many authors have long held executive positions and have been involved with decision making at a product or at a portfolio level As such it is expected that this book will attract a very broad audience including decision makers in pharmaceutical R however with a few exceptions they require a relatively basic knowledge of statistics by a reader

Advances in Sensitivity Analysis and Parametric Programming Tomas Gal,H.J. Greenberg,2012-12-06 The standard view of Operations Research Management Science OR MS dichotomizes the field into deterministic and probabilistic nondeterministic stochastic subfields This division can be seen by reading the contents page of just about any OR MS textbook The mathematical models that help to define OR MS are usually presented in terms of one subfield or the other This separation comes about somewhat artificially academic courses are conveniently subdivided with respect to prerequisites an initial overview of OR MS can be presented without requiring knowledge of probability and statistics text books are conveniently divided into two related semester courses with deterministic models coming first academics tend to specialize in one subfield or the other and practitioners also tend to be expert in a single subfield But no matter who is involved in an OR MS modeling situation deterministic or probabilistic academic or practitioner it is clear that a proper and correct treatment of any problem situation is accomplished only when the analysis cuts across this dichotomy
