Higher Homotopy Structures in Topology and Mathematical Physics James D. Stasheff, John McCleary, 1999 Since the work of Stasheff and Sugawara in the 1960s on recognition of loop space structures on H spaces the notion of higher homotopies has grown to be a fundamental organizing principle in homotopy theory differential graded homological algebra and even mathematical physics This book presents the proceedings from a conference held on the occasion of Stasheff's 60th birthday at Vassar in June 1996 It offers a collection of very high quality papers and includes some fundamental essays on topics that open new areas

The Collected Mathematical Papers of James Joseph Sylvester James Joseph Sylvester, 2005 From the Preface The longest paper in volume I is On the Theory of the Syzygetic Relations of Two Rational Integral Functions comprising an application to the Theory of Sturm's Functions and to this many of the shorter papers in the volume are contributory the volume contains also Sylvester's dialytic method of elimination his Essay on Canonical Forms and early investigations in the theory of Invariants It also contains celebrated theorems as to Determinants and investigations as to the Transformation of Quadratic Forms and the recognition of the Invariant factors of a matrix Among the Papers contained in Volume 2 are the author's Lecture on Geometry delivered before the Gresham Committee the author's seven lectures on the Partition of Numbers in outline the long memoir on Newton's Rule the Presidential Address to the Mathematical and Physical section of the British Association at Exeter and a set of papers *Nugae Mathematicae* Volume 3 deals very largely with the author's enumerative method of obtaining the complete system of concomitants of a system of quantics with the help of generating functions the brief but very luminous papers on the Constructive Theory of Partitions his Commemoration Day Address at Johns Hopkins University 1877 investigations on chemistry and algebra the paper on Certain Ternary Cubic Form Equations and the paper on Subinvariants and Perpetuants Volume 4 contains Sylvester's Constructive Theory of Partitions papers on Binary Matrices and the Lectures on the Theory of Reciprocants There is an added Index to the four volumes and Biographical Notice of Sylvester

Geometry Turned On

James King, Doris Schattschneider, 1997-10-30 Articles about the uses of active exploratory geometry carried out with interactive computer software *Software Pioneers* Manfred Broy, Ernst Denert, 2012-12-06 A lucid statement of the philosophy of modular programming can be found in a 1970 textbook on the design of system programs by Gouthier and Pont

1 | Cf10 23 which we quote below A well defined segmentation of the project effort ensures system modularity Each task forms a separate distinct program module At implementation time each module and its inputs and outputs are well defined there is no confusion in the intended interface with other system modules At checkout time the integrity of the module is tested independently there are few scheduling problems in synchronizing the completion of several tasks before checkout can begin Finally the system is maintained in modular fashion system errors and deficiencies can be traced to specific system modules thus limiting the scope of detailed error searching Usually nothing is said about the criteria to be used in dividing the system into modules This paper will discuss that issue and by means of examples suggest some criteria which can be used in decomposing a system into modules

A Brief Status Report The major advancement in the area of modular programming has been the development of coding techniques and assemblers which 1 allow one module to be written with little knowledge of the code in another module and 2 allow modules to be reassembled and replaced without reassembly of the whole system

Samuel Pepys, Isaac Newton, James Hodgson, and the Beginnings of Secondary School Mathematics Nerida F. Ellerton, M. A. (Ken) Clements, 2017-03-02 This book tells one of the greatest stories in the history of school mathematics Two of the names in the title Samuel Pepys and Isaac Newton need no introduction and this book draws attention to their special contributions to the history of school mathematics According to Ellerton and Clements during the last quarter of the seventeenth century Pepys and Newton were key players in defining what school mathematics beyond arithmetic and elementary geometry might look like The scene at which most of the action occurred was Christ's Hospital which was a school ostensibly for the poor in central London The Royal Mathematical School RMS was established at Christ's Hospital in 1673 It was the less well known James Hodgson a fine mathematician and RMS master between 1709 and 1755 who demonstrated that topics such as logarithms plane and spherical trigonometry and the application of these to navigation might systematically and successfully be taught to 12 to 16 year old school children From a wider history of school education perspective this book tells how the world's first secondary school mathematics program was created and how slowly but surely what was being achieved at RMS began to influence school mathematics in other parts of Great Britain Europe and America The book has been written from the perspective of the history of school mathematics Ellerton and Clements's analyses of pertinent literature and of archival data and their interpretations of those analyses have led them to conclude that RMS was the first major school in the world to teach mathematics beyond arithmetic on a systematic basis to students aged between 12 and 16 Throughout the book Ellerton and Clements examine issues through the lens of a long time theoretical perspective From a historiographical perspective this book emphasizes how the history of RMS can be portrayed in very different ways depending on the vantage point from which the history is written The authors write from the vantage point of international developments in school mathematics education and therefore their history of RMS differs from all other

histories of RMS most of which were written from the perspective of the history of Christ s Hospital *Accounts and Papers*
