Exercise and Biomechanical Intervention in the Prevention, Management and Rehabilitation of Neuro-musculoskeletal Disorders, volume II Qichang Mei, Liming
 Shu, Justin Fernandez, 2024-11-19 Neuromusculoskeletal biomechanics has been a popular topic in understanding the
 disorders of the human motor system during daily clinical and sport specific activities Recent studies have been conducted to
 examine the neuromusculoskeletal control e.g postural control gait stability and falling the mechanisms of sports injuries e.g
 Anterior Cruciate Ligament Achilles Tendon hamstring strain and bone fracture and clinical diseases e.g joint Osteoarthritis
 and cerebral palsy etc and the task based functional assessment However previous biomechanical approaches such as the
 traditional lab based experiments musculoskeletal MSK modeling and Finite Element FE simulation are employed separately
 to investigate the above biomechanical problems In recent decades several excellent and open source platforms or software
 have been developed based on the rapid development of technology and advances in interdisciplinary fusion The cross
 platform compatibility challenges were overcome specifically for subject specific to population based studies experimental
 scenarios lab motion capture to intelligent wearables and markerless sensing and rigid to continuum tissue loading formation
 adaptability and damage All these techniques when combined may offer promising plausibility to understand motor disorders

or diseases As a result this Research Topic will serve as a compendium of techniques mentioned above but not limited to for understanding neuromusculoskeletal disorders with a special interest in fusion with Digital Technologies This Research Topic aims to gather Original Research articles and Review articles that integrate current state of the art neuromusculoskeletal including musculoskeletal neuromuscular or neuroskeletal modeling approaches and Digital Technologies Digital Twin DT to investigate the complex biomechanical mechanisms for the prevention diagnosis treatment and rehabilitation of disorders in the human motor system Moreover this Research Topic would like to publish studies on experiment driven and muscle driven computational MSK and FE modeling of neuro muscular tendon bone and joint ligament and cartilage tissues for the injury and rehabilitation of the musculoskeletal system Fitting Smooth Functions to Data Charles Fefferman,Arie

Essentials of Tropical Combinatorics Michael Joswig, 2021-12-08

The goal of this book is to explain at the graduate student level connections between tropical geometry and optimization. Building bridges between these two subject areas is fruitful in two ways. Through tropical geometry optimization algorithms become applicable to questions in algebraic geometry. Conversely looking at topics in optimization through the tropical geometry lens adds an additional layer of structure. The author covers contemporary research topics that are relevant for applications such as phylogenetics, neural networks, combinatorial auctions, game theory, and computational complexity. This self-contained book grew out of several courses given at Technische Universität Berlin and elsewhere and the main prerequisite for the reader is a basic knowledge in polytope theory. It contains a good number of exercises, many examples, beautiful figures, as well as explicit tools for computations using `texttt{polymake}`.
