## **Jss One Scheme Of Work For 2nd Term 2015:**

*Human Factors in Surgery* Tara N. Cohen, Eric J. Ley, Bruce L. Gewertz, 2020-09-28 This book delivers a comprehensive review of human factors principles as they relate to surgical care inside and outside of the operating theatre. It provides multi-dimensional human centered insights from the viewpoint of academic surgeons and experts in human factors engineering to improve workflow, treatment time and outcomes. To guide the reader, the book begins broadly with Human Factors Principles for Surgery, then narrows to a discussion of surgical specialties and scenarios. Each chapter follows the following structure: 1. An overview of the topic at hand to provide a reference for readers; 2. a case study or story to illustrate the topic; 3. a discussion of the topic including human factors insights; 4. lessons learned or personal pearls related to improving the specific system described. Written by experts in the field, *Human Factors in Surgery: Enhancing Safety and Flow in Patient Care* describes elements of the surgical system and highlights the lessons learned from systems engineering. It serves as a valuable resource for surgeons at any level in their training that wish to improve their practice.

*Advanced Information Networking and Applications* Leonard Barolli, Isaac Woungang, Tomoya Enokido, 2021-04-30 This book covers the theory, design and applications of computer networks, distributed computing and information systems. Networks of today are going through a rapid evolution and there are many emerging areas of information networking and their applications. Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing, communications, intelligence and actuations is emerging as a critically important disruptive computer class based on a new platform networking structure and interface that enable novel low cost and high volume applications. Several of such applications have been difficult to realize because of many interconnections problems. To fulfill their large range of applications, different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks. The aim of the book *Advanced Information Networking and Applications* is to provide latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications.

**Dynamic Personality Science. Integrating Between-Person Stability and Within-Person Change** Nadin Beckmann, Robert E. Wood, 2017-12-28 Personality can be understood from at least two perspectives. One focuses on stable between-person differences or traits. The other perspective focuses on within-person differences and dynamics, i.e. fluctuations in personality in response to situations and across time. This Research Topic reflects recent developments in personality research to integrate both trait and dynamic perspectives. An integrated view on personality recognizes both stability in between-person differences and within-person change. Contributors are drawn from research teams across Europe, North America and Australasia and from basic and applied fields including organizational, educational and clinical. The studies reported provide new evidence in support of an

integrative approach highlight currently active areas of research and propose new directions of research Current streams of research include the study of contingent units of personality and within person processes underlying traits the comparisons of findings based on within vs between person data the conceptualisation and operationalization of perceived and objective change in situation variables the malleability of personality and the potential for personality interventions Integrative approaches using within person designs provide new bottom up insights into general principles of personality that explain differences between people while reflecting the complexities of within person personality dynamics at the level of the individual

*Engineering Applications of Neural Networks* Giacomo Boracchi, Lazaros Iliadis, Chrisina Jayne, Aristidis Likas, 2017-07-30 This book constitutes the refereed proceedings of the 18th International Conference on Engineering Applications of Neural Networks EANN 2017 held in Athens Greece in August 2017 The 40 revised full papers and 5 revised short papers presented were carefully reviewed and selected from 83 submissions The papers cover the topics of deep learning convolutional neural networks image processing pattern recognition recommendation systems machine learning and applications of Artificial Neural Networks ANN applications in engineering 5G telecommunication networks and audio signal processing The volume also includes papers presented at the 6th Mining Humanistic Data Workshop MHDW 2017 and the 2nd Workshop on 5G Putting Intelligence to the Network Edge 5G PINE

Mathematics for Healthcare Krasimira Tsaneva-Atanasova, Vanessa Diaz-Zuccarini, 2018-09-28 In 1996 and with extraordinary prescience Panfilov and Holden had highlighted in their seminal book Computational Biology of the Heart that biology was potentially the most mathematical of all sciences Fast forward 20 years and we have seen an explosion of applications of mathematics in not only biology but healthcare that has already produced significant breakthroughs not imaginable more than 20 years ago Great strides have been made in explaining through quantitative methods the underlying mechanisms of human disease not without considerable ingenuity and effort Biological mechanisms are bewildering complex ever evolving multi scale variable difficult to fully access and understand This poses immense challenges to the computational physiology community that nevertheless has developed an impressive arsenal of tools and methods in a vertiginous race to combat disease with the tall order of improving human healthcare Mechanistic models are now contending with the advent of machine learning in healthcare and the hope is that both approaches will be used synergistically since the complexity of human pathophysiology and the difficulty of acquiring human datasets will require both deductive and inductive methods This Research Topic presents work that is currently at the frontier in computational physiology with a striking range of applications from diabetes to graft failure and using a multitude of mathematical tools This collection of articles represents a snapshot in a field that is moving a dizzying speed bringing understanding of fundamental mechanism and solutions to healthcare problems experienced by healthcare systems all over the world
