Systems Design for Remote Healthcare Koushik Maharatna, Silvio Bonfiglio, 2013-11-13 This book provides a multidisciplinary overview of the design and implementation of systems for remote patient monitoring and healthcare. Readers are guided step by step through the components of such a system and shown how they could be integrated in a coherent framework for deployment in practice. The authors explain planning from subsystem design to complete integration and deployment given particular application constraints. Readers will benefit from descriptions of the clinical requirements underpinning the entire application scenario, physiological parameter sensing techniques, information processing approaches and overall application dependent system integration. Each chapter ends with a discussion of practical design challenges and two case studies are included to provide practical examples and design methods for two remote healthcare systems with different needs.

Creating an Inclusive School Climate Tamika P. La Salle-Finley, 2023-07-25 Creating an Inclusive School Climate introduces school psychology stakeholders to a wealth of foundations, individualized experiences and school improvement efforts intended to bolster the outcomes of our most vulnerable learners. As student populations grow increasingly diverse, sociocultural variables have never been more important to supporting school climate. Using an original cultural ecological framework, this book builds on the experiences of historically underrepresented and oppressed youth to foster a socially just, strengths-based perspective for implementing school improvement efforts within multi-tiered systems. Faculty, graduate students, researchers and professionals in the field will come away with a conceptually and methodologically sound understanding of the interrelationships between personal characteristics, culture, ecological contexts and school climate.
