Improving Exercise Testing Methods and Interpretation in Human Health and Diseases Mathieu Gruet, Leonardo Alexandre Peyré-Tartaruga, Martin Behrens, 2023-11-28 Exercise testing is a versatile tool for health purposes When used in combination with specific devices and sensors it can provide valuable diagnostic and prognostic information in a wide range of populations Exercise testing outcomes are also useful for training prescriptions and defining responses to clinical trials evaluating interventions Whole body maximal tests e g cardiopulmonary exercise testing field tests e g walking tests and modalities isolating a muscle group e g isokinetic endurance testing all have their advantages and limits and should be viewed as complementary Recent advances in wearable technology and artificial intelligence provide unique opportunities to broaden the application of these tests and facilitate their interpretation In the meantime the clinimetric properties of some widely used exercise tests are still poorly documented in several clinical populations which hampers optimal diagnosis and management Moreover most exercise tests used in clinical practice are suffering from a lack of ecological validity and there is a need to develop and valid new testing modalities that best mimic daily life functioning This Research Topic aims to extend our knowledge regarding the validity and clinical utility of various exercise testing modalities and facilitate their interpretation This topic supports a multimodal approach to exercise testing and welcomes reports investigating either whole body or local muscle testing Submission of research combining different exercise modalities and investigating their potential links are particularly encouraged Inter disciplinary research with studies integrating concepts tools and data from various disciplines like exercise physiology biomechanics and psychology are of particular interest for this Research Topic This topic is not restricted in terms of age medical conditions or type of disease but manuscripts must have clear implications for human health

Innovation in Physical Activity and Sport Borja Sañudo Corrales, Jerónimo García-Fernández, 2021-12-16 This book reports on cutting edge digital technologies and their applications in physical activity and sport Gathering selected chapters from the 1st International Conference on Technology in Physical Activity and Sport held virtually on November 24 27 2020 from Seville Spain it offers a practice oriented and evidence based perspective on how technologies can be used for evaluation and control of different parameter relating to sport physical activity and health It covers how digital technologies can be applied for training and monitoring purposes and for improving athlete s performance how they influence sport habits in different populations demonstrating their growing influence in sport businesses such as fitness centers and management and provides new findings on the connection between physical activity and human health suggesting some interesting directions for future studies With a good balance of laboratory research and information relevant for professional trainers this book will provide bioengineers sport scientists and physiotherapists with timely information and a multidisciplinary perspective on the use of digital technologies to improve fitness wellbeing and health in different population groups

Proceedings of MPCPE 2021 Nikolai Vatin, Svetlana Roshchina, Dmitrijs Serdjuks, 2022-01-30 This book gathers selected

contributions in the field of civil and structural engineering as presented by international researchers and engineers at the International Conference on Materials Physics Building Structures and Technologies in Construction Industrial and Production Engineering MPCPE held in Vladimir Russia on April 26 28 2021 The book covers a wide range of topics including the theory and design of capital construction facilities engineering and hydraulic structures development of innovative solutions in the field of modeling and testing of reinforced concrete metal and wooden structures as well as composite structures based on them investigation of complex dynamic effects on construction objects and many others directions Intended for professional builders designers and researchers The contributions which were selected by means of a rigorous international peer review process highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations

Recent Advances in Computational Optimization Stefka Fidanova, 2024-03-27 The book is a comprehensive collection of extended contributions from the Workshops on Computational Optimization 2022 Our everyday life is unthinkable without optimization We try to minimize our effort and to maximize the achieved profit Many real world and industrial problems arising in engineering economics medicine and other domains can be formulated as optimization tasks This book presents recent advances in computational optimization The book includes important real problems like modeling of physical processes parameter settings for controlling different processes agricultural modeling transportation problems energy management machine scheduling air pollution modeling optimization of fast food restaurant chain and solving engineering and financial problems It shows how to develop algorithms for them based on new intelligent methods like evolutionary computations ant colony optimization constrain programming Monte Carlo method and others This book demonstrates how some real world problems arising in engineering economics and other domains can be formulated as optimization problems

Assessment and Monitoring of Human Movement Cristian Romagnoli,Giuseppe Annino,Elvira Padua,Vincenzo Bonaiuto,2025-10-03 Human movement studies have long involved researchers from various scientific disciplines such as biomechanics functional anatomy physiology and neuroscience in responding to the growing demand in sports science for reliable and accurate methods and tools for monitoring and evaluating physical performance Accurately measuring body movement data i e walking running throwing swimming and paddle stroke is useful for identifying biomechanical and kinetics and physiological and metabolic variables However the transition of functional assessment of physical activity with accurate and reliable data from the laboratory to the daily life environment has been complex Thanks to technological innovation miniaturized and wearable sensors can non invasively measure and monitor kinematic and dynamic data related to the performance of a specific sport of physical activity broadening their application in the clinical field such as monitoring and improving patient care directly at home or at a distance Therefore the quantitative analysis of human movement is a necessary and effective tool that helps transversally both the medical physical fitness and wellness and the purely competitive environment linked to high level sport

Health Promotion in Schools, Universities, Workplaces, and Communities Graça S. Carvalho,Emily Darlington,Teresa Vilaça,2024-12-17 Health education well being improvement and advocacy are effective health promotion strategies among cutting edge Public Health practices Salutogenic perspectives rooted in ecological models have taken their rightful place to empower individuals and communities to change their life ecosystems and preserve and improve their health It is imperative to shift from targeting protective or risk factors which have linear causal relationships with health conditions and or comorbidities and encompass a systemic understanding of the role of health determinants in creating health Individual collective and structural ecological approaches can better reduce health inequities Moreover engaging the presumed beneficiaries from such strategies ensures that actual needs are identified and choices are context specific It improves the whole implementation process as well as its results Higher levels of participation such as co creation imply a bottom up voluntary collaborative process rooted in values of diversity mutual trust openness autonomy freedom and respect as well as shared expertise responsibility and decision making which are essential values in co creating health promotion

Exploring the Interaction between Health-promoting and Health Risk Behaviors in Health, volume II Huixuan Zhou, Feng Jiang, Yi-lang Tang, 2025-09-15 Health related behaviors play positive or negative roles in people's health For instance health risk behaviors such as sedentary behaviors e.g. binge watching TV and playing computer games the use of alcohol tobacco or other substances and lack of sleep have been found to negatively affect the physical and mental health of people On the other hand some studies show that health promoting behaviors such as physical activity and healthy dietary habits can mitigate or reverse the negative effects of health risk behaviors on health outcomes In the meantime some studies indicate that the harmful effects of some health risk behaviors may not be mitigated by health promoting behaviors For instance some studies show that sedentary behaviors and physical activity are independently associated with some physical and mental health outcomes interventions to increase physical activity with and without decreasing sedentary time lead to different health outcomes Clearly more research is needed to show the interaction between health promoting behaviors and health risk behaviors in health which could shed light on the management of health related behaviors

New Methodological, Intervention and Neuroscientific Perspectives in Sports Psychology, volume II Antonio Hernández-Mendo, Jose María Carames Tejedor, M. Teresa Anguera, Verónica Morales-Sánchez, 2025-06-26 This Research Topic is the second volume of the Research Topic New Methodological Intervention and Neuroscientific Perspectives in Sports Psychology Please see the first volume here Within the discipline of sport psychology considerable work involves the development implementation and evaluation of interventions to improve the world of sport The importance of theory as a basis for such intervention efforts has been strongly emphasized In recent years research has shown that there are three factors on which to base future developments methodological innovations e.g. Mixed Methods new intervention

approaches e g Empowering Disempowering Climates and advances in neuroscience e g inhibitory circuits Regarding methodological innovations the importance of mixed methods in this field is highlighted by their profound significance Indeed procedural innovations with direct and indirect observational data has allowed the observational methodology to be considered as a mixed method in itself This approach has been implemented in recent years in many publications relating to various sports Other methodological advances involve the evolution of structural equation analysis For example the increasing use of invariance analysis mediation analysis PLS software which allows non normal samples multilevel analysis generalizability analysis and the graphical evolution of data with programs such as Neo4j
