Architectural Modelmaking:

Architectural Modelmaking Second Edition Nick Dunn, 2014-09-08 The physical model is an important communication tool for architects. Although the proliferation of CAD programs has enabled the creation of increasingly complex computer models and virtual environments, there is also a growing need to address the three-dimensional qualities of architecture that may be lost when using such media. This book focuses on the inspiring possibilities for modelling the built environment with all the different media and techniques available. In describing the use of different models in different contexts, the book provides a practical guide to how and why models are used and what they are used for. This second edition includes more detailed step-by-step exercises, expanded discussion of materials and techniques, updated coverage of digital techniques, and new case studies.

Architectural Modelmaking Nick Dunn, 2010-09-08 This book focuses on the inspiring possibilities for creating three-dimensional physical models of the built environment with all the different media and techniques that are now available. Through description of the use of different models in different contexts, the book provides a practical and effective guide to how and why models are used, in addition to what they are used for and how they relate to architecture education.

A History of Architectural Modelmaking in Britain David Lund, 2022-12-16 Architectural modelmakers have long carried out their work hidden behind the scenes of architectural design and in presenting a history of architectural modelmaking in Britain for the first time, this book casts a new light on their remarkable skills and achievements. By telling the story of the modelmakers who make architectural models rather than architects who commission and use them, this book seeks to celebrate their often overlooked contribution to the success and endurance of the architectural model in Britain over the past one hundred and forty years. Drawing from extensive archival research and interviews with practicing and retired modelmakers, this book traces the complete history of architectural modelmaking in Britain from its initial emergence as a specialist occupation at the end of the nineteenth century through to the present day. It reveals the legacy of John Thorp, the first professional architectural modelmaker in Britain who opened his business in London in 1883, and charts the lives and careers of the innovative and creative modelmakers who followed him. It examines the continually evolving materials, tools, and processes of architectural modelmaking and outlines the profound ideological, economic, and technological influences that have shaped the profession's development. Illustrated with over one hundred photographs of architectural models from previously undocumented archives, this book will be of great interest to architectural modelmakers, academics, and historians, as well as anyone with an interest in architectural history and modelmaking.

Architectural Models Wolfgang Knoll, Martin Hechinger, 2007-12-15 Architects' models serve as a bridge between an idea and its realization. Models are one of the three means by which an architect invents and develops his design: sketch, model, computer model. No other representational form is as effective in enabling the viewer to perceive the spaces, shapes, surfaces, and textures created by the architect's design; it is therefore a prerequisite in the design process.

Architectural Models provides clear and comprehensible instruction explaining how design ideas can be skillfully translated into models. Some 200 black and white illustrations and new to this edition more than 40 extraordinary full color photographs provide a comprehensive visual explication of the text. In this completely revised edition the authors convey practical basics and offer a wealth of innovative and valuable suggestions for students of architecture or graphic arts as well as for experienced architectural model makers.

Advanced Architectural Modelmaking Eva Pascual Miro, P P Carbonero, R P Coderch, 2010-10-26 Everything a student professional or hobbyist needs to know about creating high quality models for study and presentation. Modelmaking is about building a three dimensional and reduced scale representation of a structure or architectural intervention. Models possess a double significance on the one hand they are scale representations of projects on the other hand they are themselves objects endowed with expressive significance. Advanced Architectural Modelmaking explains the key techniques used to create architectural presentation models. A comprehensive reference for anyone who makes models either by hand or with the help of a computer this book covers the basic characteristics of architectural models as a form of representation the materials and tools used and the processes involved considering both the theoretical aspects and main techniques. A step by step guide illustrates the entire procedure involved in creating five different types of architectural models. An ideal testing ground for investigating new physical and material solutions models constitute an intermediate phase in the architectural process between the initial idea and final construction. An essential instrument in presenting and communicating designs they also help in assessing and checking the solutions that have been conceived allowing the structural organization and the spatial and massing composition of the work to be reproduced as well as showing details of the construction materials colors textures and interrelationships with the environment.

An Alphabet of Architectural Models, 2021-10-19 For thousands of years architects have used models to invent experiment and communicate. A world in miniature such models are even more varied in their purposes and materials than their full scale counterparts. This beautifully designed book explores the uniquely fascinating nature of the architectural model through 26 illustrated essays one for each letter of the alphabet from A for Ancient on the world's oldest models to Z for Zoom on the photography of models. Unbound by the practicalities of life size construction models allow architects the flexibility and freedom to think in three dimensions. Whether made for purely speculative exercises or to solve a specific problem they are aids to the imagination. Equally they can be used as detailed and accurate representations of particular places either built or as yet unrealized in order to convey information to patrons or the public. Models can be made in a wide variety of media from paper cork and wood to such ephemeral materials as sugar and jelly. Most recently the advent of digital technologies has transformed possibilities for prototyping which in turn has greatly influenced architectural design. Models also have a vibrant life beyond the design process. Souvenir models collected on the Grand Tour 1:1 scale plaster models of architectural fragments displayed in museums and architectural toys that have delighted children and adults alike are just some of their

manifestations outside the architect's office. Written by architects, model makers, curators, conservators, and scholars, the texts in this absorbing Alphabet explore such varied but fundamental issues as modelling materials and techniques, scale, and the role of the model in the design process. They also go beyond conventional accounts to look at models under the X-ray machine, their use in film, and edible models. The result is a wide-ranging, insightful, and original account of the multiple lives of the architectural model.

Model Making for Architects Matt Driscoll, 2013-06-30. Model making is a beautiful and skilful craft, and architectural model making is a vital part of the building process. The architectural model is often the first time that a building is visualized in 3D. It can capture the excitement of the architect's vision but can also reveal unforeseen difficulties. *Model Making for Architects* explains the role of the model within the architectural and planning process. It advises on the many ways of representing a building and the many techniques of making a model. With practical instruction throughout, it is an invaluable tool both for the model maker and for the architect seeking to commission a model of their building. With contributions from leading practitioners, case studies on multi-million pound projects, and step-by-step exercises, this new book provides a unique insight into the process of architectural model making and looks at the new technology and opportunities available to the model maker. What and who is an architectural model for? What type of model should be used, and when? What scale is most appropriate? These questions are answered in this new book, which provides a unique insight into the process of architectural model making. Illustrated with examples of top models of multi-million pound projects, it will be invaluable for architectural model makers, architects, surveyors, and interior designers. Superbly illustrated with 227 colour photographs, Matt Driscoll is the founding director of Base Models, renowned for creating beautiful yet practical architectural models.

Spon's Architects' and Builders' Price Book 2025 AECOM, 2024-09-13. Compiled by AECOM, the 2025 edition has been updated with the latest pricing information to help you manage your projects over the next 12 months through this challenging period of higher inflation and labour shortages. It includes 20,000 prices for the most frequently specified construction items, the majority with labour constants and detailed build-ups. All prices have been updated via comprehensive supplier engagement combined with AECOM's market intelligence and a short-term inflationary forecast to ensure you have the most accurate cost data available. Activity descriptions and build-ups have been updated to reflect changes to standard specifications, Building Regulation changes, emerging practices, and changing outputs. Although it suits a wide range of project sizes, this is the only price book which sets out a detailed cost base for contracts exceeding 4,000,000 in value. All the standard features you have come to expect from SPON'S ARCHITECTS AND BUILDERS PRICE BOOK are also included: Hundreds of alternative materials prices for the more unusual items; Detailed guidance on wage rates, daywork cost limits, and allowances; property insurance and professional fees; plus useful formulae, design criteria, and trade association addresses. Included within the inside front cover of every book is a VitalSource eBook redemption code giving one user access to the content digitally until the end of December 2025.
