Introduction to Audiovisual Archives

Peter Stockinger, 2013-02-07. Today, audiovisual archives and libraries have become very popular, especially in the field of collecting, preserving, and transmitting cultural heritage. However, the data from these archives or libraries—videos, images, sound tracks, etc.—constitute as such only potential cognitive resources for a given public or target community. They have to undergo more or less significant qualitative transformations in order to become user- or community-relevant intellectual goods. These qualitative transformations are performed through a series of concrete operations such as audiovisual text segmentation, content description, and indexing, pragmatic profiling, translation, etc. These and other operations constitute what we call the semiotic turn in dealing with digital audiovisual texts: corpora of texts or even entire audiovisual archives and libraries. They demonstrate practically and theoretically the well-known from data to meta-data or from simple information to relevant knowledge problem—a problem that obviously directly influences the effective use, the social impact, and relevancy and therefore also the future of digital knowledge archives. It constitutes indeed the heart of a diversity of important R&D programs and projects all over the world.
