Manuals and Publications United States. Department of the Interior, 1954 **School District Instructional**
Computer-use Evaluation Manual Chris Morton, Don Beverly, 1989 *The Original Manuals of Noble Ape* Tom Barbalet, 2011-03-15
The Noble Ape Simulation was originally developed in 1996 as a biological and cognitive simulation. It was very basic and showed a graphical representation of an island populated with Noble Apes through a simple contour map. The initial development was done in Australia and Malaysia. The early development had considerable documentation. The documentation gave it a weight of interest the software alone did not have. This is that documentation. *Manuals Combined: U.S. Marine Corps Basic Reconnaissance Course (BRC) References*, Over 5 300 total pages.
MARINE RECON Reconnaissance units are the commander's eyes and ears on the battlefield. They are task organized as a highly trained six man team capable of conducting specific missions behind enemy lines. Employed as part of the Marine Air Ground Task Force, reconnaissance teams provide timely information to the supported commander to shape and influence the battlefield. The varying types of missions a Reconnaissance team conduct depends on how deep in the battle space they are operating. Division Reconnaissance units support the close and distant battlespace while Force Reconnaissance units conduct deep reconnaissance in support of a landing force. Common missions include but are not limited to: Plan, coordinate and conduct amphibious ground reconnaissance and surveillance to observe, identify and report enemy activity and collect other information of military significance. Conduct specialized surveying to include underwater reconnaissance and/or demolitions, beach permeability and topography, routes, bridges, structures, urban/rural areas, helicopter landing zones (LZ), parachute drop zones (DZ), aircraft forward operating sites and mechanized reconnaissance missions. When properly task organized with other forces, equipment or personnel assist in specialized engineer, radio and other special reconnaissance missions. Infiltrate mission areas by necessary means to include surface, subsurface and airborne operations. Conduct Initial Terminal Guidance (ITG) for helicopters, landing craft, parachutists, air delivery and resupply. Designate and engage selected targets with organic weapons and force fires to support battlespace shaping. This includes designation and terminal guidance of precision guided munitions. Conduct post strike reconnaissance to determine and report battle damage assessment on a specified target or area. Conduct limited scale raids and ambushes. Sustainable Pest Management in Date Palm: Current Status and Emerging Challenges Waqas Wakil, Jose Romeno Faleiro, Thomas A. Miller, 2015-12-21 Date palm *Phoenix dactylifera* L. Arecales, *Arecaceae*, is an important palm species cultivated in the arid regions of the world since prehistoric times and traditionally associated with the life and culture of the people in the Middle East and North Africa, which are the pre-dominant date palm growing regions worldwide. The Food and Agriculture Organization of the UN estimates that there are over 100 million date palms with an annual production of over 7.5 million tonnes. A recent report on the arthropod fauna of date palm enlists 112 species of insects and mites associated with date palm worldwide, including 22 species attacking stored dates. Enhanced monoculture of date palm in several date palm growing countries, coupled with climate change, unrestrained use of chemical insecticides, and extensive international trade, is likely to impact the pest complex and the related natural enemies in the date agro-ecosystems. In view of the importance of date palm as an emerging crop of the future and the need to develop and deploy ecologically sound and socially acceptable IPM techniques, this book aims to comprehensively address issues related to the biology and sustainable management of major insect and mite pests of date palm by assessing the current IPM strategies available, besides addressing emerging challenges and future research priorities. The issues pertaining to the role of semiochemicals in date palm IPM, involving new strategies revolving around attract and kill and push-pull technologies, phytoplasmas and their insect vectors, with implications for date palm, innovative methods for managing storage pests of dates, and knowledge gaps in devising sustainable strategies for the management of red palm weevil *Rhynchophorus ferrugineus* Olivier are also addressed. *Vegetation Management Program (CA, NV)*, 1988 **The Sexually Violent Predator Program's Assessment Process Continues to Evolve** Florida.
