Cooling and Heating Load Calculation Manual, 1980 **Cooling and Heating Load Calculation Manual** Faye C. McQuiston, 1994 **Cooling and Heating Load Calculation Manual** Faye C. McQuiston, American Society of Heating, Refrigerating and Air-Conditioning Engineers, Jeffrey D. Spitler, 1992 Provide a comprehensive source of theory procedures and data for cooling and heating load calculations for other than residential buildings **Load Calculation Applications Manual** Jeffrey D. Spitler, 2009 The Load Calculation Applications Manual builds upon three previous ASHRAE publications that focus on the calculation of cooling and heating loads for commercial buildings Whether you are a new engineer who is learning how to do load calculations or a veteran who wishes to learn the radiant time series RTS method this book is a must have resource Outlined in the manual are two methods for calculating cooling loads in nonresidential buildings the heat balance HB method and the RTS method Both methods were first fully presented for use in design load calculations in the predecessor to this volume Cooling and Heating Load Calculation Principles But much has changed since the book was first published in 1998 The Load Calculation Applications Manual steps in where the last book left off to provide you with the latest information regarding load calculations In the book's early chapters an overview of the heat transfer processes present in buildings and a brief discussion of how they are analyzed together in order to determine the cooling load are provided Later chapters focus on the theory and application of the RTS method systems and psychrometrics heating load calculations and the HB method and its implementation The accompanying CD contains Microsoft Excel spreadsheets that compute cooling loads using the RTS method These spreadsheets calculate the solar irradiation conduction time factor series and radiant time factors utilized by the method Plus you can adapt the spreadsheets to compute cooling loads for a wide range of buildings **Cooling and Heating Load Calculation Manual**, 1960 **Handbook of Heating, Ventilation, and Air Conditioning** Jan F. Kreider, 2000-12-26 The building industry accounts for about 25 percent of the US gross national product through the design construction operation and maintenance of commercial institutional and residential buildings The Handbook of Heating Ventilation and Air Conditioning provides a current comprehensive review of the latest procedures and trends in the industry It combines practice and theory systems and control and modern methods and technologies to provide in one volume all of the design and operation information needed by HVAC engineers Through a link on the CRC Web site owners of the handbook can access new material periodically posted by the author [Air Conditioning and Refrigeration Engineering](#) Frank Kreith, Shan K.
