

## Greatest Common Factor

- To factor polynomials you use the GCF
- GCF - is the Greatest Common factor that can go into all terms
- can be coefficients and variables

### Examples

1.  $5x + 30y$   
GCF  $\rightarrow 5(x + 6y)$

2.  $16bc^2 + 24bc$   
 $8bc(2c + 3)$

3.  $m^3n - m^2n^2 + 5mn$   
 $mn(m^2 - mn + 5n)$

## Trinomial

$$ax^2 + bx + c$$

- If "a" cannot be factored out GCF, use Slip + Slide
- Step 1: "Slip" a to the end of the trinomial + multiply by C

$$ax^2 + bx + C$$

- Step 2: Factor this new basic trinomial

- Step 3: Divide both your factors by the value you "slipped" in Step 2

- Step 4: Reduce the fractions + "slide" any denominators next to the variable

### Examples

1.  $2x^2 + 5x + 2$   
 $x^2 + 5x + 10$   
 $(x+1)(x+4)$   
 $\frac{1}{2} \quad \frac{5}{2}$   
 $(2x+1)(x+2)$

2.  $12m^2 - 34m - 15$   
 $3(4m^2 - 8m - 5)$   
 $3(m^2 - 2m - 30)$   
 $3(m-10)(m+3)$   
 $3(2m-5)(2m+1)$

3.  $12m^2 + 2x - 2$   
 $2(6m^2 + x - 1)$   
 $2(m^2 + x - 6)$

**Calculus Renewal** Susan L. Ganter,2013-06-29 Calculus Reform Or as many would prefer calculus renewal These are terms that for better or worse have become a part of the vocabulary in mathematics departments across the country The movement to change the nature of the calculus course at the undergraduate and secondary levels has sparked discussion and

controversy in ways as diverse as the actual changes. Such interactions range from coffee pot conversations to university curriculum committee agendas to special sessions on calculus renewal at regional and national conferences. But what is the significance of these activities? Where have we been and where are we going with calculus and more importantly the entire scope of undergraduate mathematics education? In April 1996 I received a fellowship from the American Educational Research Association AERA and the National Science Foundation NSF. This fellowship afforded me the opportunity to work in residence at NSF on a number of evaluation projects including the national impact of the calculus reform movement since 1988. That project resulted in countless communications with the mathematics community and others about the status of calculus as a course in isolation and as a significant player in the overall undergraduate mathematics and science experience for students and faculty. While at NSF and through a second NSF grant received while at the American Association for Higher Education I also was part of an evaluation project for the Institution wide Reform IR program.

*Managing Mathematical Projects - with Success!* P.P.G. Dyke, 2006-04-29 The first student centred guide on how to write projects and case studies in mathematics with particular attention given to working in groups. Something maths undergraduates have not traditionally done. With half of all universities in the UK including major project work of significant importance this book will be essential reading for all students on the second or final year of a mathematics degree or on courses with a high mathematical content for example physics and engineering.

**Facilitator's Guidebook for Use of Mathematics Situations in Professional Learning** Rose Mary Zbiek, Glendon W. Blume, M. Kathleen Heid, 2018-01-01 The depth and breadth of a mathematics teacher's understanding of mathematics matter most as the teacher engages in the daily work of teaching. One of the major challenges to teachers is to be ready to draw on the relevant mathematical ideas from different areas of the school curriculum and from their postsecondary mathematics experiences that can be helpful in explaining ideas to students making instructional decisions, creating examples and engaging in other aspects of their daily work. Being mathematically ready and confident requires teachers to engage in ongoing professional learning that helps them to connect mathematics to events like those they live on a daily basis. The purpose of this volume is to provide teachers, teacher educators and other facilitators of professional learning opportunities with examples of authentic events and tools for discussing those events in professional learning settings. The work shared in *Facilitator's Guidebook for Use of Mathematics Situations in Professional Learning* resulted from a collaborative effort of school mathematics supervisors and university mathematics educators. The collaborators joined their varied experiences as teachers, coaches, supervisors, teacher educators and researchers to suggest ways to scaffold activities, encourage discussion and instigate reflection with teacher participants of differing mathematics backgrounds and with varying teaching assignments. Each guide has ideas for engaging and furthering mathematical thought across a range of facilitator and participant mathematics backgrounds and draws on the collaborators' uses of the Situations with in-service and prospective teachers. The events and mathematical ideas connected to each event come from Situations in

Mathematical Understanding for Secondary Teaching A Framework and Classroom Based Situations A Situation is a description of a classroom related event and the mathematics related to it For each of six Situations school and university collaborators developed a facilitator s guide that presents ideas and options for engaging teachers with the event and the mathematical ideas The Guidebook also contains suggestions for how teachers and others might develop new Situations based on events from their own classrooms as a form of professional learning Both teacher educators and school based facilitators can use this volume to structure sessions and inspire ideas for professional learning activities that are rooted in the daily work of mathematics teachers and students

**Commutative Algebra** David Eisenbud, 2013-12-01 Commutative Algebra is best understood with knowledge of the geometric ideas that have played a great role in its formation in short with a view towards algebraic geometry The author presents a comprehensive view of commutative algebra from basics such as localization and primary decomposition through dimension theory differentials homological methods free resolutions and duality emphasizing the origins of the ideas and their connections with other parts of mathematics Many exercises illustrate and sharpen the theory and extended exercises give the reader an active part in complementing the material presented in the text One novel feature is a chapter devoted to a quick but thorough treatment of Grobner basis theory and the constructive methods in commutative algebra and algebraic geometry that flow from it Applications of the theory and even suggestions for computer algebra projects are included This book will appeal to readers from beginners to advanced students of commutative algebra or algebraic geometry To help beginners the essential ideals from algebraic geometry are treated from scratch Appendices on homological algebra multilinear algebra and several other useful topics help to make the book relatively self contained Novel results and presentations are scattered throughout the text
