Female Reproductive System Holt Biology:

Evolutionary Ecology of Social and Sexual Systems J. Emmett Duffy, Martin Thiel, 2007-09-06 Understanding of animal social and sexual evolution has seen a renaissance in recent years with discoveries of frequent infidelity in apparently monogamous species the importance of sperm competition active female mate choice and eusocial behavior in animals outside the traditional social insect groups Each of these findings has raised new questions and suggested new answers about the evolution of behavioral interactions among animals This volume synthesizes recent research on the sexual and social biology of the Crustacea one of the dominant invertebrate groups on earth Its staggering diversity includes ecologically important inhabitants of nearly every environment from deep sea trenches through headwater streams to desert soils The wide range of crustacean phenotypes and environments is accompanied by a comparable diversity of behavioral and social systems including the elaborate courtship and wildly exaggerated morphologies of fiddler crabs the mysterious queuing behavior of migrating spiny lobsters and even eusociality in coral reef shrimps This diversity makes crustaceans particularly valuable for exploring the comparative evolution of sexual and social systems Despite exciting recent advances however general recognition of the value of Crustacea as models has lagged behind that of the better studied insects and vertebrates This book synthesizes the state of the field in crustacean behavior and sociobiology and places it in a conceptually based comparative framework that will be valuable to active researchers and students in animal behavior ecology and evolutionary biology It brings together a group of internationally recognized and rising experts in fields related to crustacean behavioral ecology ranging from physiology and functional morphology through mating and social behavior to ecology and phylogeny Each chapter makes connections to other non crustacean taxa and the volume closes with a summary section that synthesizes the contributions discusses anthropogenic impacts highlights unanswered questions and provides a vision for profitable future research The Latest and Best of TESS, 1991

Reproductive Biology and Phylogeny of Lizards and Tuatara Justin L. Rheubert, Dustin S. Siegel, Stanley E. Trauth, 2014-12-19 Reproductive Biology and Phylogeny of Lizards and Tuatara is a remarkable compendium of chapters written by the world's leading experts from over four continents The book begins with a chapter recounting historical discoveries in reproductive biology and a review of phylogenetics and up to date hypotheses concerning evolutionary relationships among

Pathology of Simian Primates, Part 2 R. N. Fiennes, 1972-04-24 **Signaling-Mediated Control of Cell Division** Swathi Arur, 2017-02-28 This volume covers the current knowledge base on the role of signaling and environmental pathways that control the normal development of germline stem cells meiotic progression of oocytes events of oocyte maturation and fertilization and the birth of an embryo Germ cells are uniquely poised to sustain life across generations through the fusion of oocyte and sperm Because of the central importance of germ cells to life much work has been dedicated to obtaining a clear understanding of the molecular and signaling events that control their formation and maintenance Germ cells are set aside from somatic cells in the embryo and go through specialized meiotic cell cycles as the animal matures These cell cycles are interspersed with long periods of arrest In human females meiosis I is initiated in the fetus At birth oocytes are arrested in meiosis I after puberty every month an oocyte initiates meiosis II ovulation Upon sperm availability these cells are fertilized generate an embryo and the cycle of life continues During meiotic I progression and arrest the fitness of oocytes and their progeny are likely influenced by environmental cues and signaling pathways A lot of recent work has focused on understanding the mechanisms that regulate oocyte fitness and quality in humans and vertebrates Much of our understanding on the events of meiosis I and germline stem cell populations comes from work in invertebrates wherein the germline stem cells produce oocytes continuously through adult development In both invertebrates and vertebrates nutritional and signaling pathways control the regulation of stem cells in such a manner so as to couple production of gametes with the

nutritional availability Additionally mature oocytes arrest both in meiosis I and meiosis II and signaling and nutritional pathways have been shown to regulate their formation and maintenance such that despite long periods of arrest the oocyte quality is assured and errors in chromosome segregation and varied cytoplasmic events are minimal
