

Lesson 19: Equations for Tangent Lines to Circles

Student Outcomes

- Given a circle, students find the equations of two lines tangent to the circle with specified slopes.
- Given a circle and a point outside the circle, students find the equation of the line tangent to the circle from that point.

Lesson Notes

This lesson builds on the understanding of equations of circles in Lessons 17 and 18 and on the understanding of tangent lines developed in Lesson 11. Further, the work in this lesson relies on knowledge from Module 4 related to **G-GPE.B.4** and **G-GPE.B.5**. Specifically, students must be able to show that a particular point lies on a circle, compute the slope of a line, and derive the equation of a line that is perpendicular to a radius. The goal is for students to understand how to find equations for both lines with the same slope tangent to a given circle and to find the equation for a line tangent to a given circle from a point outside the circle.

Classwork

Opening Exercise (5 minutes)

Students are guided to determine the equation of a line perpendicular to a chord of a given circle.

Opening Exercise

A circle of radius 5 passes through points $A(-3, 3)$ and $B(3, 3)$.

- a. What is the special name for segment $\overline{AB}$?

Segment $\overline{AB}$ is called a chord.

- b. How many circles can be drawn that meet the given criteria? Explain how you know.

Two circles of radius 5 pass through points A and B . Two distinct circles, at most, can have two points in common.

- c. What is the slope of $\overline{AB}$?

The slope of $\overline{AB}$ is $-\frac{3}{3}$.

- d. Find the midpoint of $\overline{AB}$.

The midpoint of $\overline{AB}$ is $(0, 2)$.

- e. Find the equation of the line containing a diameter of the given circle perpendicular to $\overline{AB}$.

$y - 2 = 3(x - 0)$

Scaffolding:

- Provide struggling students with a picture of the two circles containing the indicated points.
- Alternatively, struggling students may benefit from simply graphing the two points.
