Nguyen, 2015-09-22 This book is about a recently developed class of strategies known as the fence methods which fits particularly well in non conventional and complex model selection problems with practical considerations The idea involves a procedure to isolate a subgroup of what are known as correct models of which the optimal model is a member This is accomplished by constructing a statistical fence or barrier to carefully eliminate incorrect models Once the fence is constructed the optimal model is selected from amongst those within the fence according to a criterion which can be made flexible In particular the criterion of optimality can incorporate consideration of practical interest thus making model selection a real life practice Furthermore this book introduces a data driven approach called adaptive fence which can be used in a wide range of problems involving determination of tuning parameters or constants Instead of relying on asymptotic theory the fence focuses on finite sample performance and computation Such features are particularly suitable to statistics in the new era
