Designing Learning for Tablet Classrooms Donovan R. Walling, 2014-02-04 The versatile cost effective technology of the tablet computer has proved to be a good fit with the learning capabilities of today's students. Not surprisingly, in more and more classrooms, the tablet has replaced not only traditional print materials but the desktop computer and the laptop as well. Designing Instruction for Tablet Classrooms makes sense of this transition, clearly showing not just how and why tablet-based learning works but how it is likely to evolve. Written for the non-technical reader, it balances elegant theoretical background with practical applications suitable to learning environments from kindergarten through college. A wealth of specialized topics ranges from course management and troubleshooting to creating and customizing e-textbooks from tablet use in early and remedial reading to the pros and cons of virtual field trips. And for maximum usefulness, early chapters are organized to spotlight core skills needed to negotiate the new design frontier, including Framing the learning design approach, Analyzing the learning environment, Designing learning that capitalizes on tablet technology, Developing activities that match learning needs, Implementing the learning design, Conducting evaluations before, during, and after. This is proactive reading befitting a future of exciting developments in educational technology. For researchers and practitioners in this and allied fields, Designing Instruction for Tablet Classrooms offers limitless opportunities to think outside the box. Virtual Fetal Pig Dissection as an Agent of Knowledge Acquisition and Attitudinal Change in Female High School Students Rebecca S. Maloney, 2002 One way to determine if all students can learn through the use of computers is to introduce a lesson taught completely via computers and compare the results with those gained when the same lesson is taught in a traditional manner. This study attempted to determine if a virtual fetal pig dissection can be used as a viable alternative for an actual dissection for females enrolled in high school biology classes by comparing the knowledge acquisition and attitudinal change between the experimental virtual dissection and control actual dissection groups. Two hundred and twenty-four students enrolled in biology classes in a suburban all-girl parochial high school participated in this study. Female students in an all-girl high school were chosen because research shows differences in science competency and computer usage between the genders that may mask the performance of females on computer-based tasks in a science laboratory exercise. Students who completed the virtual dissection scored significantly higher on practical and objective tests that were used to measure knowledge acquisition. Attitudinal change was measured by examining the students' attitudes toward dissections, computer usage in the classroom, and toward biology both before and after the dissections using pre and post surveys. Significant results in positive gain scores were found in the virtual dissection group's attitude toward dissections and their negative gain score toward virtual dissections. Attitudinal changes toward computers and biology were not significant. A purposefully selected sample of the students were interviewed in addition to gathering a sample of the students' daily dissection journals as data highlighting their thoughts and feelings about their dissection experience. Further research is suggested to determine if a

virtual laboratory experience can be a substitute for actual dissections or may serve as an enhancement to an actual dissection

How Shelter Pets are Brokered for Experimentation Allie Phillips, 2010-12-28 Back in the 1940s the practice referred to as Pound seizure became a common practice in taxpayer funded animal shelters across the country Whether for cosmetic testing human or animal drug testing medical technique and tool testing or biochemical testing these once family pets are subjected to experimentation that often ends in death While many states fail to keep accurate data the number of pets that become victims of pound seizure easily reaches the thousands and though most citizens are unaware of the practice it may very well be happening at their local animal shelter Pound seizure remains a dirty little secret in American society but the practice is moving toward extinction with the help of local citizens advocating for change at their shelter as well as animal rescue and welfare organizations providing assistance and advocacy Learning more about the practice as well as alternatives will help give readers a fuller picture of what's happening in American animal shelters and what they can do to stem the tide of dealers and brokers sweeping off animals to their almost certain demise
