lectures and 92 papers presented by their authors Web Intelligence Meets Brain Informatics Ning Zhong, Jiming Liu, Yiyu Yao, Jinglong Wu, Shengfu Lu, Kuncheng Li, 2007-11-29 This book constitutes the thoroughly refereed post workshop proceedings of the First WICI International Workshop on Web Intelligence meets Brain Informatics WImBI 2006 which was held in Beijing China in December 2006 The workshop explores a new perspective of Web Intelligence WI research from the viewpoint of Brain Informatics BI The 26 revised full length papers presented together with three introductory lectures have been carefully reviewed and selected Towards an Integrated Approach to Measurement, Analysis and Modeling of Cortical Networks A. Ravishankar Rao, Guillermo A. Cecchi, Ehud Kaplan, 2016-03-17 The amount of data being produced by neuroscientists is increasing rapidly driven by advances in neuroimaging and recording techniques spanning multiple scales of resolution The availability of such data poses significant challenges for their processing and interpretation To gain a deeper understanding of the surrounding issues the Editors of this e Book reached out to an interdisciplinary community and formed the Cortical Networks Working Group and the genesis of this e Book thus began with the formation of this Working Group which was supported by the National Institute for Mathematical and Biological Synthesis in the USA The Group consisted of scientists from neuroscience physics psychology and computer science and meetings were held in person A detailed list of the group members is presented in the Editorial that follows At the time we started in 2010 the term big data was hardly in existence though the volume of data we were handling would certainly have qualified Furthermore there was significant interest in harnessing the power of supercomputers to perform large scale neuronal simulations and in creating specialized hardware to mimic neural function We realized that the various disciplines represented in our Group could and should work together to accelerate progress in Neuroscience We searched for common threads that could define the foundation for an integrated approach to solve important problems in the field We adopted a network centric perspective to address these challenges as the data are derived from structures that are themselves network like We proposed three intertwined threads consisting of measurement of neural activity analysis of network structures deduced from this activity and modeling of network function leading to theoretical insights This approach formed the foundation of our initial call for papers When we issued the call for papers we were not sure how many papers would fall into each of these threads We were pleased that we found significant interest in each thread and the number of submissions exceeded our expectations This is an indication that the field of neuroscience is ripe for the type of integration and interchange that we had anticipated We first published a special topics issue after we received a sufficient number of submissions This is now being converted to an e book to strengthen the coherence of its contributions One of the strong themes emerging in this e book is that network based measures capture better the dynamics of brain processes and provide features with greater discriminative power than point based measures Another theme is the importance of network oscillations and synchrony Current research is shedding light on the principles that govern the establishment and maintenance of network oscillation states These principles could explain

why there is impaired synchronization between different brain areas in schizophrenics and Parkinson s patients Such research could ultimately provide the foundation for an understanding of other psychiatric and neurodegenerative conditions The chapters in this book cover these three main threads related to cortical networks Some authors have combined two or more threads within a single chapter We expect the availability of related work appearing in a single e book to help our readers see the connection between different research efforts and spur further insights and research

Chasing Men on Fire Stephen G. Waxman,2018-03-09 A thirty year quest from genes to pain signaling neurons to people with a rare genetic disorder that makes them feel they are on fire Two soldiers both with wounds injuring the same nerve show very different responses one is disabled by neuropathic pain unable to touch the injured limb because even the lightest contact triggers excruciating discomfort the other notices numbness but no pain at all Could the difference lie in their genes In this book described in the foreword by Nobel Laureate James Rothman as so well written that it reads like a detective novel Stephen Waxman recounts the search for a gene that controls pain a search spanning more than thirty years and three continents The story moves from genes to pain signaling neurons that scream when they should be silent to people with a rare genetic disorder who feel they are on fire Waxman explains that if pain signaling neurons are injured by trauma or disease they can become hyperactive and send pain signals to the brain even without external stimulus Studying the hyperactive mutant pain gene in man on fire syndrome has pointed the way to molecules that produce pain more broadly within the general population in the rest of us Waxman s account of the many steps that led to discovery of the pain gene tells the story behind the science of how science happens

Foundations on Natural and Artificial Computation José M. Ferrández,José Ramón Álvarez,Félix de la Paz,Fco. Javier Toledo,2011-05-12 The two volumes LNCS 6686 resp LNCS 6687 constitute the refereed proceedings of the 4th International Work Conference on the Interplay between Natural and Artificial Computation IWINAC 2011 held in La Palma Canary Islands Spain in May June 2011 The 108 revised full papers presented in

LNCS 6686 resp LNCS 6687 were carefully reviewed and selected from numerous submissions The first part LNCS 6686 entitled Foundations on Natural and Artificial Computation includes all the contributions mainly related to the methodological conceptual formal and experimental developments in the fields of neurophysiology and cognitive science The second part LNCS 6687 entitled New Challenges on Bioinspired Applications contains the papers related to bioinspired programming strategies and all the contributions related to the computational solutions to engineering problems in different application domains specially Health applications including the CYTED Artificial and Natural Computation for Health CANS research network papers *Status Report on Speech Research* ,1981 Artificial Neural Networks - ICANN 96 Christoph von der Malsburg,1996-07-10 This book constitutes the refereed proceedings of the sixth International Conference on Artificial Neural Networks ICANN 96 held in Bochum Germany in July 1996 The 145 papers included were carefully selected from numerous submissions on the basis of at least three reviews also included are abstracts of the six invited plenary talks All in all the set of papers presented reflects the state of the art in the field of ANNs Among the topics and areas covered are a broad spectrum of theoretical aspects applications in various fields sensory processing cognitive science and AI implementations and neurobiology *Spike-timing dependent plasticity* Henry Markram,Wulfram Gerstner,Per Jesper Sjöström, Hebb s postulate provided a crucial framework to understand synaptic alterations underlying learning and memory Hebb s theory proposed that neurons that fire together also wire together which provided the logical framework for the strengthening of synapses Weakening of synapses was however addressed by not being strengthened and it was only later that the active decrease of synaptic strength was introduced through the discovery of long term depression caused by low frequency stimulation of the presynaptic neuron In 1994 it was found that the precise relative timing of pre and postsynaptic spikes determined not only the magnitude but also the direction of synaptic alterations when two neurons are active together Neurons that fire together may therefore not necessarily wire together if the precise timing of the spikes involved are not tightly correlated In the subsequent 15 years Spike Timing Dependent Plasticity STDP has been found in multiple brain regions and in many different species The size and shape of the time windows in which positive and negative changes can be made vary for different brain regions but the core principle of spike timing dependent changes remain A large number of theoretical studies have also been conducted during this period that explore the computational function of this driving principle and STDP algorithms have become the main learning algorithm when modeling neural networks This Research Topic will bring together all the key experimental and theoretical research on STDP **Coherent Behavior in Neuronal Networks** Krešimir Josic,Jonathan Rubin,Manuel Matias,Ranulfo Romo,2009-08-22 Recent experimental research advances have led to increasingly detailed descriptions of how networks of interacting neurons process information With these developments it has become clear that dynamic network behaviors underlie information processing and that the observed activity patterns cannot be fully explained by simple concepts such as synchrony and phase locking These new insights raise

significant challenges and offer exciting opportunities for experimental and theoretical neuroscientists. **Coherent Behavior in Neuronal Networks** features a review of recent research in this area from some of the world's foremost experts on systems neuroscience. The book presents novel methodologies and interdisciplinary perspectives and will serve as an invaluable resource to the research community. Highlights include the results of interdisciplinary collaborations and approaches as well as topics such as the interplay of intrinsic and synaptic dynamics in producing coherent neuronal network activity and the roles of globally coherent rhythms and oscillations in the coordination of distributed processing that are of significant research interest but have been underrepresented in the review literature. With its cutting edge mathematical, statistical, and computational techniques, this volume will be of interest to all researchers and students in the field of systems neuroscience.

Mechanistic Approaches to Interactions of Electric and Electromagnetic Fields with Living Systems Martin Blank, E. Findl, 2013-11-11. Although there is general agreement that exogenous electric and electromagnetic fields influence and modulate the properties of biological systems, there is no consensus regarding the mechanisms by which such fields operate. It is the purpose of this volume to bring together and examine critically the mechanistic models and concepts that have been proposed. We have chosen to arrange the papers in terms of the level of biological organization emphasized by the contributors. Some papers overlap categories, but the progression from ions and membrane surfaces through macromolecules and the membrane matrix to integrated systems establishes a mechanistic chain of causality that links the basic interactions in the relatively well understood simple systems to the complex living systems where all effects occur simultaneously. The backgrounds of the invited contributors include biochemistry, biophysics, cell biology, electrical engineering, electrochemistry, electrophysiology, medicine, and physical chemistry. As a result of this diversity, the mechanistic models reflect the differing approaches used by these disciplines to explain the same phenomena. Areas of agreement define the common ground, while the areas of divergence provide opportunities for refining our ideas through further experimentation. To facilitate the interaction between the different points of view, the authors have clearly indicated those published observations that they are trying to explain, i.e., the experiments that have been critical in their thinking. This should establish a consensus regarding important observations. In the discussion of theories.

Encyclopedia of the Human Brain, 2002-07-04. In the past decade, enormous strides have been made in understanding the human brain. The advent of sophisticated new imaging techniques, e.g., PET, MRI, MEG, etc., and new behavioral testing procedures have revolutionized our understanding of the brain, and we now know more about the anatomy, functions, and development of this organ than ever before. However, much of this knowledge is scattered across scientific journals and books in a diverse group of specialties: psychology, neuroscience, medicine, etc. The *Encyclopedia of the Human Brain* places all information in a single source and contains clearly written summaries on what is known of the human brain. Covering anatomy, physiology, neuropsychology, clinical neurology, neuropharmacology, evolutionary biology, genetics, and behavioral science, this four-volume encyclopedia contains over 200 peer-reviewed, signed articles from

experts around the world The Encyclopedia articles range in size from 5 30 printed pages each and contain a definition paragraph glossary outline and suggested readings in addition to the body of the article Lavishly illustrated the Encyclopedia includes over 1000 figures many in full color Managing both breadth and depth the Encyclopedia is a must have reference work for life science libraries and researchers investigating the human brain

Social Perception M.D. Rutherford, Valerie A. Kuhlmeier, 2013-08-30 An interdisciplinary exploration of perceptual and cognitive processes underlying the ability to perceive social information drawing on current research and new experimental techniques As we enter a room full of people we instantly have a number of social perceptions We have an automatic perception of others as subjective agents with their own points of view thoughts and goals and we can quickly interpret minimal visual information to infer that something is animate This book explores the perceptual and cognitive processes that allow humans to perceive and understand this social information quickly and apparently effortlessly Top researchers in fields ranging from developmental psychology to vision science consider the perception of biological and animate motion inferences based on this motion and the early development of these abilities These innovative contributions reflect a recent renewal of interest in the attribution of agency and the understanding of goal directed behavior which has been accompanied by a rapid increase in empirical discoveries enabled by such new experimental techniques as brain imaging The research presented in Social Perception suggests that an intuitive understanding of others is an integral part of human psychology develops early relies on a network of brain regions and may be compromised in autism Contributors Dare Baldwin Lara Bardi H Clark Barrett Erin Cannon You jung Choi Willem E Frankenhuys Tao Gao Emily D Grossman Antonia Hamilton Petra Hauf Valerie A Kuhlmeier Jeff Loucks Scott A Love Yuyan Luo Elena Mascalzoni Phil McAleer Richard Ramsey Lucia Regolin M D Rutherford Kara Sage Brian J Scholl Maggie Shiffrar Francesca Simion Jessica Sommerville James P Thomas Nikolaus Troje Amanda Woodward

Metastable Dynamics of Neural Ensembles Emili Balaguer-Ballester, Ruben Moreno-Bote, Gustavo Deco, Daniel Durstewitz, 2018-03-19 A classical view of neural computation is that it can be characterized in terms of convergence to attractor states or sequential transitions among states in a noisy background After over three decades is this still a valid model of how brain dynamics implements

cognition This book provides a comprehensive collection of recent theoretical and experimental contributions addressing the question of stable versus transient neural population dynamics from complementary angles These studies showcase recent efforts for designing a framework that encompasses the multiple facets of metastability in neural responses one of the most exciting topics currently in systems and computational neuroscience
