

Bleeding the brakes

Start the engine. Actuate the parking brake to release the brake (see symbol on TMC screen). Bleed the parking brake cylinders as required with the bleed screw (A) (two cylinders for each axle).

Bleed the working brake with the other bleed screw (B), see illustration. Start the engine. Actuate the parking brake switch to the release mode. Bleed the brake as described above. It is suitable to alternately bleed the parking brake and working brake to ensure that all air is bled from the system. Bleed for a fairly long period at each point so that all air is purged.

Bleeding the brake pedal

When required, bleed the foot-brake circuit in the following way:

- Do not start the engine.
- Ensure that there is fluid in the brake fluid container, located to the right inside the right-hand door.
- Bleed the foot-brake circuit with the bleed screw and from the coupling (C) underneath the pedal. Bleed as for a normal fluid brake.
