Premiums National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Affordability of National Flood Insurance Program Premiums, 2016-02-21 When Congress authorized the National Flood Insurance Program NFIP in 1968 it intended for the program to encourage community initiatives in flood risk management charge insurance premiums consistent with actuarial pricing principles and encourage the purchase of flood insurance by owners of flood prone properties in part by offering affordable premiums The NFIP has been reauthorized many times since 1968 most recently with the Biggert Waters Flood Insurance Reform Act of 2012 BW 2012 In this most recent reauthorization Congress

placed a particular emphasis on setting flood insurance premiums following actuarial pricing principles which was motivated by a desire to ensure future revenues were adequate to pay claims and administrative expenses BW 2012 was designed to move the NFIP towards risk based premiums for all flood insurance policies The result was to be increased premiums for some policyholders that had been paying less than NFIP risk based premiums and to possibly increase premiums for all policyholders Recognition of this possibility and concern for the affordability of flood insurance is reflected in sections of the Homeowner Flood Insurance Affordability Act of 2014 HFIAA 2014 These sections called on FEMA to propose a draft affordability framework for the NFIP after completing an analysis of the efforts of possible programs for offering means tested assistance to policyholders for whom higher rates may not be affordable BW 2012 and HFIAA 2014 mandated that FEMA conduct a study in cooperation with the National Academies of Sciences Engineering and Medicine which would compare the costs of a program of risk based rates and means tested assistance to the current system of subsidized flood insurance rates and federally funded disaster relief for people without coverage Production of two reports was agreed upon to fulfill this mandate This second report proposes alternative approaches for a national evaluation of affordability program policy options and includes lessons for the design of a national study from a proof of concept pilot study *Financial Management of Flood Risk* OECD,2016-07-29 Disasters present a broad range of human social financial economic and environmental impacts with potentially long lasting effects This report applies the lessons from the OECD s analysis of disaster risk financing practices and its risk guidance to the specific case of floods *Handbook on the Economics of Disasters* Skidmore, Mark,2022-10-13 Evaluating the myriad dimensions of how disasters can affect economic activity and decision making this cutting edge Handbook presents a timely analysis of the conditions that reduce or exacerbate disaster impacts Addressing developments in research on disaster economics internationally recognized scholars combine theoretical considerations with empirical methods to expand and improve the field of disaster mitigation *Handbook of Insurance* Georges Dionne,2024-12-26 The Handbook of Insurance reviews the last fifty years of research developments in insurance economics and its related fields A single reference source for professors researchers graduate students regulators consultants and practitioners the book starts with the history and foundations of risk and insurance theory followed by a review of prevention and precaution asymmetric information insurance fraud risk management insurance pricing new financial innovations reinsurance corporate governance capital allocation securitization systemic risk insurance regulation the industrial organization of insurance markets and other insurance market applications The new edition covers many topics that have risen in importance since the 2nd edition such as climate risk pandemic risk insurtech digital insurance cyber risk behavioral economics Solvency II corporate governance enterprise risk management and machine learning This edition of the Handbook contains 17 new chapters Each of the chapters is written by leading international authorities in risk and insurance research All contributions are peer reviewed and each chapter can be read independently of the others It is a tour de force to

provide to the insurance industry and its stakeholders a structured complete intelligent and critical synthesis of insurance economics in the twenty first century This is what you have in your hands This third edition of the Handbook of Insurance should be the bible to anyone who wants to have a deep understanding of the complex challenges faced by insurance and reinsurance markets to create the large social value of risk sharing and risk diversification Christian Gollier Director of the Toulouse School of Economics This collective work not only offers a remarkable synthesis of cutting edge research in insurance economics but also provides a rare resource both comprehensive and authoritative for professionals seeking a deeper understanding of insurance industry fundamentals and emerging trends The content of the Handbook reflects the richness and dynamics of the field and underlines the many facets involved in better understanding how insurance works and contributes to society Jad Ariss Managing director The Geneva Association A Blueprint for Coastal Adaptation Carolyn Kousky,Billy Fleming,Alan M. Berger,2021-05-20 Tens of millions of Americans are at risk from sea level rise increased tidal flooding and intensifying storms A Blueprint for Coastal Adaptation identifies a bold new research and policy agenda and provides implementable options for coastal communities responding to these threats In this book coastal adaptation experts present a range of climate adaptation policies that could protect coastal communities against increasing risk including concrete financing recommendations Coastal adaptation will not be easy but it is achievable using varied approaches A Blueprint for Coastal Adaptation will inspire innovative and cross disciplinary thinking about coastal policy at the state and local level while providing actionable realistic policy and planning options for adaptation professionals and policymakers

Tying Flood Insurance to Flood Risk for Low-Lying Structures in the Floodplain National Research Council,Division on Engineering and Physical Sciences,Board on Mathematical Sciences and Their Applications,Division on Earth and Life Studies,Water Science and Technology Board,Committee on Risk-Based Methods for Insurance Premiums of Negatively Elevated Structures in the National Flood Insurance Program,2015-08-03 Floods take a heavy toll on society costing lives damaging buildings and property disrupting livelihoods and sometimes necessitating federal disaster relief which has risen to record levels in recent years The National Flood Insurance Program NFIP was created in 1968 to reduce the flood risk to individuals and their reliance on federal disaster relief by making federal flood insurance available to residents and businesses if their community adopted floodplain management ordinances and minimum standards for new construction in flood prone areas Insurance rates for structures built after a flood plain map was adopted by the community were intended to reflect the actual risk of flooding taking into account the likelihood of inundation the elevation of the structure and the relationship of inundation to damage to the structure Today rates are subsidized for one fifth of the NFIP s

5 5 million policies Most of these structures are negatively elevated that is the elevation of the lowest floor is lower than the NFIP construction standard Compared to structures built above the base flood elevation negatively elevated structures are more likely to incur a loss because they are inundated more frequently and the depths and durations of inundation are greater Tying Flood Insurance to Flood Risk for Low Lying Structures in the Floodplain studies the pricing of negatively elevated structures in the NFIP This report review current NFIP methods for calculating risk based premiums for these structures including risk analysis flood maps and engineering data The report then evaluates alternative approaches for calculating risk based premiums and discusses engineering hydrologic and property assessment data needs to implement full risk based premiums The findings and conclusions of this report will help to improve the accuracy and precision of loss estimates for negatively elevated structures which in turn will increase the credibility fairness and transparency of premiums for policyholders

Underwater Rebecca Elliott,2021-01-05 Communities around the United States face the threat of being underwater This is not only a matter of rising waters reaching the doorstep It is also the threat of being financially underwater owning assets worth less than the money borrowed to obtain them Many areas around the country may become economically uninhabitable before they become physically unlivable In Underwater Rebecca Elliott explores how families communities and governments confront problems of loss as the climate changes She offers the first in depth account of the politics and social effects of the U S National Flood Insurance Program NFIP which provides flood insurance protection for virtually all homes and small businesses that require it In doing so the NFIP turns the risk of flooding into an immediate economic reality shaping who lives on the waterfront on what terms and at what cost Drawing on archival interview ethnographic and other documentary data Elliott follows controversies over the NFIP from its establishment in the 1960s to the present from local backlash over flood maps to Congressional debates over insurance reform Though flood insurance is often portrayed as a rational solution for managing risk it has ignited recurring fights over what is fair and valuable what needs protecting and what should be let go who deserves assistance and on what terms and whose expectations of future losses are used to govern the present An incisive and comprehensive consideration of the fundamental dilemmas of moral economy underlying insurance Underwater sheds new light on how Americans cope with loss as the water rises

The Economics of Environmental Risk V. K. Smith,2022-12-13 Featuring real world examples of how risk information affects public choices The Economics of Environmental Risk expertly demonstrates that policymakers need to consider how people learn about those risks Offering insights into examples such as hazardous waste radon smoking hurricanes and terrorist threats over the past four decades this intuitive book illustrates environmental risks and the choices made to mitigate the potential effects

Senate Record Votes ,2014 *Charleston* Susan Crawford,2023-04-04 An unflinching look at a beautiful endangered tourist pummeled and history filled American city At least thirteen million Americans will have to move away from American coasts in the coming decades as rising sea levels and increasingly severe storms put lives at risk and

cause billions of dollars in damages In Charleston South Carolina denial boosterism widespread development and public complacency about racial issues compound the city like our country has no plan to protect its most vulnerable In these pages Susan Crawford tells the story of a city that has played a central role in America s painful racial history for centuries and now as the waters rise stands at the intersection of climate and race Unbeknownst to the seven million mostly white tourists who visit the charming streets of the lower peninsula each year the Holy City is in a deeply precarious position Weaving science narrative history and the family stories of Black Charlestonians Charleston chronicles the tumultuous recent past in the life of the city from protests to hurricanes while revealing the escalating risk in its future A bellwether for other towns and cities Charleston is emblematic of vast portions of the American coast with a future of inundation juxtaposed against little planning to ensure a thriving future for all residents In Charleston we meet Rev Joseph Darby a well regarded Black minister with a powerful voice across the city and region who has an acute sense of the city s shortcomings when it comes to matters of race and water We also hear from Michelle Mapp one of the city s most promising Black leaders and Quinetha Frasier a charismatic young Black entrepreneur with Gullah Geechee roots who fears her people s displacement And there is Jacob Lindsey a young white city planner charged with running the city s ten year comprehensive plan efforts who ends up working for a private developer These and others give voice to the extraordinary risks the city is facing The city of Charleston with its explosive gentrification over the last thirty years crystallizes a human tendency to value development above all else At the same time Charleston stands for our need to change our ways and the need to build higher drier more densely connected places where all citizens can live safely Illuminating and vividly rendered Charleston is a clarion call and filled with characters who will stay in the reader s mind long after the final page
