Control 2008 Michael E. Drews, Robert D. Culp, 2008 *Guidance, Control and Docking for CubeSat-based Active Debris Removal* Mohamed Khalil Ben-Larbi, 2023-08-07 While a paradigm shift in space industry has already started involving mass production of higher standardized large distributed systems such as constellations there are no effective solutions existing for the mass removal of satellites Many indicators point to a further increase in the space traffic in Earth orbit in the near future which could imply new dynamics in the evolution of the space debris environment Even in case of diligent compliance with the Inter Agency Space Debris Coordination Committee IADC mitigation guidelines the growth in space traffic complicates its management and drastically increases the probability of accidents and system failures NASA scientist Donald J Kessler proposed a scenario in which the density of objects in low Earth orbit is high enough that collisions between objects

could cause a cascade that renders space unusable for many generations Therefore a reliable and affordable capability of removing or servicing non functional objects is essential to guarantee sustainable access to Earth orbit Recently the CubeSat design standard introduced a new class of cost efficient small spacecraft and thereby offers a potential solution to the active debris removal ADR problem The development of a novel CubeSat compatible ADR technology has significant advantages such as the use of commercial off the shelf parts reduced launch cost and reduced design efforts This thesis presents in the frame of an ADR mission an approach to advanced rendezvous and docking with non cooperative targets via CubeSat It covers the design process of simulation systems used for verification purposes the ideation and implementation of novel guidance control and docking techniques as well as their verification and evaluation The outcome of this research is a series of validated software tools processes technical devices and algorithms for automated approach and docking that have been tested in simulation and with prototype hardware

Scientific and Technical Aerospace Reports, 1995 Untersuchungen zur Anwendung von Entfernungssensoren für Kleinsatelliten Grimm, Martin, 2019-09-30

Heutzutage wird immer häufiger der Einsatz von nicht speziell für die Raumfahrt qualifizierten Komponenten für Weltraumanwendungen in Betracht gezogen. Als einer der Hauptgründe spielen die geringeren Kosten eine wesentliche Rolle, jedoch sind Verfügbarkeit, Leistungsanforderungen sowie der Formfaktor weitere Gründe, nicht raumfahrtqualifizierte Elektronikbauteile einzusetzen. Insbesondere bei Kleinsatelliten wird oft der Einsatz von solchen Bauteilen erwogen. Nicht raumfahrtqualifizierte Elektronikbauteile können die hohen Anforderungen, die an die Zuverlässigkeit von Raumfahrtkomponenten gestellt werden, in der Regel nicht erfüllen. Durch die großen Schwankungen, die schlechte Nachverfolgbarkeit sowie die schnelle Obsoleszenz sind Qualifizierungsmaßnahmen oft nicht nachhaltig. In dieser Arbeit wurde daher ein neuartiger Ansatz zum Einsatz von nicht raumfahrtqualifizierten Elektronikbauteilen am Beispiel von Entfernungssensoren untersucht. Präzise Entfernungsbestimmung ist für Satellitenkonstellationen sowie für Manöver beim Rendezvous und Docking von Bedeutung. Satellitenkonstellationen aus Kleinsatelliten stellen aufgrund verschiedener Faktoren eine neuartige attraktive Messmöglichkeit dar. Dabei muss für gewisse Messaufgaben sowie auch aus Sicherheitsgründen die Entfernungsinformation innerhalb der Konstellation bekannt sein. Bei RVD (Rendezvous und Docking) Manövern zum Einfangen von Weltraumschrott wird aufgrund der schwierigen Finanzierungslage eine kosteneffektive Lösung angestrebt. Für den Anflug auf bis zu 30 m existieren bereits mehrere vielversprechende kosteneffektive Messsysteme. In dieser Arbeit wurden verschiedene nicht raumfahrtqualifizierte Entfernungssensoren für den Messbereich von unterhalb 30 m untersucht. Die bewusste Wahl unterschiedlicher Entfernungssensoren soll dabei gezielt die Wahrscheinlichkeit des Auftretens von ungleichen Degradationseffekten erhöhen. Die damit einhergehenden unterschiedlichen Parameterdrifts und Degradationen sollen über eine Kombination der Sensoren gemindert werden, um so eine mögliche Anwendung im Weltraum zu erlauben.

Today the use of selected electrical, electronic and electromechanical commercial off the shelf (COTS) components in space applications is expanding. The main drive for using COTS in space is cost saving, but market non-availability, performance issues and a small form factor are further reasons to go for COTS. Small satellite missions in particular tend to apply COTS already more than others. COTS parts usually do not meet the high reliability requirements for space applications. The lot-to-lot variations, the lack of traceability and the rapid obsolescence of such parts make qualification ineffective.

Therefore in this work a new approach to apply COTS for the use in space was developed and investigated on the example of distance measurement sensors. Accurate distance information is important for satellite constellations and for rendezvous and docking maneuvers in space. Due to the advances in small satellite technology missions involving multiple small satellites become more and more attractive. Maintaining an accurate distance in a close satellite formation can be crucial for system and safety issues. Furthermore a cost effective distance measurement solution is particularly demanded for space debris removal since the question of the financial responsibility is still unclear. Multiple cost effective distance measurement methods have already been proven reliable for distance measurements from far range down to about 30 m. This work investigates various COTS distance sensors for measurements below 30 m for use on small satellites. With a combination of different COTS distance sensors with distinct measurement principles it is intended to prove that a fusion of the measurements of different sensors can help to counteract the degradation of the individual sensors under space environmental conditions. Furthermore this could enable to maintain the accuracy of the overall distance measurement and to open up a possibility to lower system costs and to enable the use of state of the art technology in space applications.

Flying Safety, 1957 **Sliding Mode Control** Andrzej Bartoszewicz, 2011-04-11 The main objective of this monograph is to present a broad range of well worked out recent application studies as well as theoretical contributions in the field of sliding mode control system analysis and design. The contributions presented here include new theoretical developments as well as successful applications of variable structure controllers primarily in the field of power electronics, electric drives and motion steering systems. They enrich the current state of the art and motivate and encourage new ideas and solutions in the sliding mode control area. **Air Force Magazine**, 2007-07 **Cruising World**, 2007-04 **New Scientist**, 2009 **New Scientist and Science Journal**, 2009 **Governor Henry Ellis and the Transformation of British North America** Edward J. Cashin, 2007-11-01 Henry Ellis 1721-1806 is recognized as the most capable of Georgia's three colonial governors. In this biography Edward J. Cashin presents the fullest account to date of Ellis's life and shows that his tenure as governor of Georgia was but one of many accomplishments by a man of exemplary intelligence, courage and vision. Cashin puts Ellis's life and career in the context of the great cultural migrations, encounters and conflicts of British imperial and American colonial history. As he traces Ellis's rise from one who implemented British foreign policy to one who played a crucial hand in formulating it, Cashin reveals the inner workings of the imperial bureaucracy and shows how colonial politics were inextricably linked to the intrigues of the royal court and the vagaries of the nobility's patronage system. The book's early chapters recall Ellis's youth and formative years as a transplanted Briton in Ireland and then tell of his seafaring exploits as he searched Canada's arctic waters for the Northwest Passage and engaged in the slave trade between Africa, the Caribbean and the American colonies, all the while enhancing his reputation as an explorer, scientist and man of letters. As Georgia's governor 1757-1760, Ellis came to be known as the colony's Second Founder after James Oglethorpe by recasting it into one

of the more economically sound less politically factionalized North American colonies In his account of Ellis s governorship Cashin shows how he had to function as a local administrator and a representative of the crown managing for instance the French and Indian War as it was fought both in his colony and in the halls and chambers of Parliament The middle chapters cover Ellis s return to England in 1761 There he accepted but eventually relinquished an appointment as governor of Nova Scotia Choosing instead to remain in England Ellis drew on his knowledge of French and Spanish colonial activity the slave trade and Indian affairs to advise Pitt Egremont Halifax and others of the king s ministry A polished statesman Ellis weathered the machinations surrounding George III s ascension to the throne and influenced the course of the war with France and the terms of its peace settlement in 1763 Ellis also had a hand in the political appointments boundary settlements and trade decisions attendant to the epochal Proclamation of 1763 which set the course of history for Quebec Nova Scotia the Floridas and the British West Indies After his invaluable help in reorganizing Britain s expanded American empire Ellis withdrew from public service in 1768 Cashin portrays Ellis in genteel retirement during which he increased his absentee landholdings in Ireland and traveled in Italy France Belgium and elsewhere on the Continent In his last years Ellis was a much sought after guest and moved within a circle of friends that included Horatio Nelson the king of Sweden and the Abbe Raynal More than an artful biography this is the story of a crucial period in American and British history as told through the experiences of one of the period s most influential behind the scenes power brokers
