

The background is a composite image. On the left is a portrait of a man with a long, curly wig, likely a mathematician from the 17th or 18th century. On the right is a chalkboard with several mathematical formulas written on it, including  $3 = \pm \sqrt{5} + z$ ,  $[0, 9]$ , and  $G = m_1 m_2 / r^2$ . At the bottom left, there is a book with a red cover and a white page. The title "THE HISTORY OF MATHEMATICS" is written in large, blue, 3D-style capital letters across the center of the image.

A History of Mathematics Florian Cajori, 1894 *Handbook on the History of Mathematics Education* Alexander Karp, Gert Schubring, 2014-01-25 This is the first comprehensive International Handbook on the History of Mathematics Education covering a wide spectrum of epochs and civilizations countries and cultures Until now much of the research into the rich and varied history of mathematics education has remained inaccessible to the vast majority of scholars not least because it has been written in the language and for readers of an individual country And yet a historical overview however brief has become an indispensable element of nearly every dissertation and scholarly article This handbook provides for the first time a comprehensive and systematic aid for researchers around the world in finding the information they need about historical developments in mathematics education not only in their own countries but globally as well Although written primarily for mathematics educators this handbook will also be of interest to researchers of the history of education in general as well as specialists in cultural and even social history

**A History of Mathematics** Florian Cajori, 1999 This Fifth Edition 1991 of a book first published in 1893 covers the period from antiquity to the close of World War I with major emphasis on advanced mathematics and in particular the advanced mathematics of the nineteenth and early twentieth centuries In one concise volume this unique book

presents an interesting and reliable account of mathematics history for those who cannot devote themselves to an intensive study. The book is a must for personal and departmental libraries. Like Cajori has mastered the art of incorporating an enormous amount of specific detail into a smooth flowing narrative. The Index for example contains not just the 300 to 400 names one would expect to find but over 1 600. And for example one will not only find John Pell but will learn who he was and some specifics of what he did and that the Pell equation was named erroneously after him. In addition one will come across Anna J Pell and learn of her work on biorthogonal systems. One will find not only H Lebesgue but the not unimportant even if not major V A Lebesgue. Of the Bernoullis one will find not three or four but all eight. One will find R Sturm as well as C Sturm. M Ricci as well as G Ricci. V Riccati as well as J F Riccati. Wolfgang Bolyai as well as J Bolyai. The mathematician Martin Ohm as well as the physicist G S Ohm. M Riesz as well as F Riesz. H G Grassmann as well as H Grassmann. H P Babbage who continued the work of his father C Babbage. R Fuchs as well as the more famous L Fuchs. A Quetelet as well as L A J Quetelet. P M Hahn and Hans Hahn. E Blaschke and W Blaschke. J Picard as well as the more famous C E Picard. B Pascal of course and also Ernesto Pascal and Etienne Pascal and the historically important V J Bouniakowski and W A Steklov seldom mentioned at the time outside the Soviet literature.
