

Tilt-Telescoping Wheel

The TILT mechanism is operated by lifting up on the small control lever on the left side of the steering column just below the direction signal, moving the steering wheel to one of six positions, and releasing the lever.

The TELESCOPE feature of the wheel is used by rotating the steering wheel locking lever beneath the horn button counter-

clockwise to unlock the mechanism, sliding the wheel up or down into the desired position and turning the locking lever clockwise to make the adjustment secure.

Both the TILT and TELESCOPE mechanisms can be changed while driving. These features also permit maximum ease in entering and leaving the car. The wheel is spring-loaded, so that lifting the tilt lever automatically raises the wheel to its uppermost position. Additional clearance can be obtained by unlocking the lever and sliding the steering wheel all the way into the column and relocking the lever.

Cruise Control

The optional Cruise Control System provides automatic speed con-

trol for your comfort when driving on freeways, turnpikes, or other non-congested highways. The system is designed to function above speeds of approximately 30 MPH.

To engage the Cruise Control, proceed as follows:

- Accelerate to desired cruising speed and partially depress and release the control button at the end of the tilt release lever.
