**A Guided Tour of Artificial Intelligence Research** Pierre Marquis, Odile Papini, Henri Prade, 2020-05-08 The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues. It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI. The book is split into three volumes: the first volume brings together twenty-three chapters dealing with the foundations of knowledge representation and the formalization of reasoning and learning; Volume 1: Knowledge representation, reasoning and learning; the second volume offers a view of AI in fourteen chapters from the side of the algorithms; Volume 2: AI Algorithms; the third volume, composed of sixteen chapters, describes the main interfaces and applications of AI. Volume 3: Interfaces and applications of AI. This second volume presents the main families of algorithms developed or used in AI to learn to infer to decide. Generic approaches to problem solving are presented: ordered heuristic search as well as metaheuristics are considered. Algorithms for processing logic-based representations of various types: first-order formulae, propositional formulae, logic programs, etc. and graphical models of various types: standard constraint networks, valued ones, Bayes nets, Markov random fields, etc. are presented. The volume also focuses on algorithms which have been developed to simulate specific intelligent processes such as planning, playing, learning and extracting knowledge from data. Finally, an afterword draws a parallel between algorithmic problems in operation research and in AI.

**Value and Reward Based Learning in Neurobots** Jeffrey L. Krichmar, Florian Röhrbein, 2015-03-05 Organisms are equipped with value systems that signal the salience of environmental cues to their nervous system, causing a change in the nervous system that results in modification of their behavior. These systems are necessary for an organism to adapt its behavior when an important environmental event occurs. A value system constitutes a basic assumption of what is good and bad for an agent. These value systems have been effectively used in robotic systems to shape behavior. For example, many robots have used models of the dopaminergic system to reinforce behavior that leads to rewards. Other modulatory systems that shape behavior are acetylcholine's effect on attention, norepinephrine's effect on vigilance, and serotonin's effect on impulsiveness, mood, and risk. Moreover, hormonal systems such as oxytocin and its effect on trust constitute a value system. This book presents current research involving neurobiologically inspired robots whose behavior is:

1. Shaped by value and reward learning
2. Adapted through interaction with the environment
3. Shaped by extracting value from the environment

At the time, BMW were going to have to create something as special and innovative as its longstanding predecessor in order to silence the naysayers. And they did.

Since its launch in 2001 BMW's modern MINI has become the pinnacle of small yet funky family cars in the premium small and sometimes not so small car segment. Now in its third generation having unveiled the new F Series in 2014, BMW MINI offers 3 and 5 door hatchback models and convertibles, the estate Clubman, the five door Countryman, the Coupe, the Roadster and the three door crossover Paceman. MINI enthusiast and motoring journalist Sophie Williamson Stothert explores the journey from 1959 to the present day, covering design and development of the new MINI launch and reception by the press, its many model variations and special editions and an owner's and buyer's guide.
