Knottnerus, 2022-11-17 **Polar Expeditions** employs structural ritualization theory to show how rituals enriched the lives of crewmembers on 19 polar expeditions over a 100 year period J David Knottnerus identifies and compares failed successful and extremely successful missions in terms of participation in ritual practices and the social psychological health of crews finding that that social and personal rituals such as work practices religious activities games birthday parties special dinners or taking walks are extremely important in increasing crewmembers ability to cope with the challenges they face including extreme dangers isolation restricted environment stress lengthy journeys and quite importantly the disruption of those practices that define our everyday lives Besides contributing to our knowledge about polar expeditions this research yields implications for our understanding of ritual dynamics in other situations such as disasters refugee camps nursing homes traumatic experiences and a new type of hazardous venture space exploration      **Psychology of Space Exploration: Contemporary Research in Historical Perspective** Douglas A. Vakoch, National Aeronautics and Space Administration, 2011-07-06 This book explores some of the contributions of psychology to yesterday s great space race today s orbiter and International Space Station missions and tomorrow s journeys beyond Earth s orbit It provides an analysis of the challenges facing future space explorers while at the same time presenting new empirical research on topics ranging from simulation studies of commercial spaceflights to the psychological benefits of viewing Earth from space      *A Risk Reduction Strategy for Human Exploration of Space* National Research Council, Institute of Medicine, Aeronautics and Space Engineering Board, Space Studies Board, Board on Health Sciences Policy, Committee on

Review of NASA's Bioastronautics Roadmap,2006-04-16 Extending the spatial and temporal boundaries of human space flight is an important goal for the nation and for the National Aeronautics and Space Administration NASA However human space flight remains an endeavor with substantial risks and these risks must be identified managed and mitigated appropriately to achieve the nation s goals in space The Bioastronautics Roadmap BR is the result of extensive commendable efforts on the part of NASA to prioritize research efforts to meet these challenges In 2003 NASA asked the Institute of Medicine IOM in collaboration with the Division on Engineering and Physical Sciences of the National Academies to conduct a review of the BR Specifically NASA asked the committee to 1 conduct a comprehensive assessment and report of the strengths and weaknesses of the content and processes of the Bioastronautics Roadmap as applied to the missions described in the President s exploration initiative and 2 identify the unique challenges for accomplishing its goals and objectives In September 2004 the committee released its preliminary report to NASA entitled Preliminary Considerations Regarding NASA s Bioastronautics Critical Path Roadmap That document presented the committee s preliminary conclusions about the strengths and weaknesses of the April 2004 version of the BR This report A Risk Reductions Strategy for Human Exploration of Space builds on those preliminary conclusions and provides recommendations to NASA about how to address the issues identified by the committee

#### **Psychology of Space Exploration: Contemporary Research in Historical Perspective**

Douglas A. Vakoch,National Aeronautics and Space Administration,2012-01-27 Through essays on topics including survival in extreme environments and the multicultural dimensions of exploration readers will gain an understanding of the psychological challenges that have faced the space program since its earliest days An engaging read for those interested in space history and psychology alike this is a highly relevant read as we stand poised on the edge of a new era of spaceflight Each essay also explicitly addresses the history of the psychology of space exploration

#### **Challenges of Human Space Exploration**

Marsha Freeman,2000-06-14 This non technical and well illustrated book tells the story of what was accomplished during the Shuttle Mir programme by three of the astronauts Based on interviews granted to the author by the astronauts the book describes the experiments they took and the lessons they learned In doing so it provides a unique insight into how adversity and challenges can be overcome in the process of exploration making it ideally suited to those planning space missions of a long duration Amongst the topics covered are growing food in space curing disease with space crystals and lessons learned from Mir It also contains interviews with managers of the space programme at the Johnson Space Centre and scientists involved in the experiments

#### Life in Extreme Environments Ricardo Amils Pibernat,Cynan

Ellis-Evans,Helmut G. Hinghofer-Szalkay,2007-07-21 From the deepest seafloor to the highest mountain from the hottest region to the cold Antarctic plateau environments labeled as extreme are numerous on Earth and they present a wide variety of features and characteristics The life processes occurring within these environments are equally diverse not only depending on stress factors e g temperature pressure pH and chemicals but also on the type of life forms ranging from microbes to

higher species How is life limited by and adapted to extreme external biotic and abiotic factors This key question summarises the deliberations raised by this exciting and fascinating research area Addressing the challenge of answering this question would help to reveal new insights and refine theories concerning the origin and evolution of life on our planet as well as life beyond Earth Investigating life processes under extreme conditions can also bring clues for understanding and predicting ecosystems responses to global changes Furthermore this area of research has a wide application potential in the fields of bio technology chemical industry pharmaceuticals biomedicine or cosmetics Investigating Life in Extreme Environments A

**Culture** Alexandra Ganser, Charne Lavery, 2023-03-25 This open access edited collection explores various aspects of how oceanic im mobilities have been framed and articulated in the literary and cultural imagination It covers the entanglements of maritime mobility and immobility as they are articulated and problematized in selected literature and cultural forms from the early modern period to the present In particular it brings cultural mobility studies into conversation with the maritime and oceanic humanities The contributors examine the interface between the traditional Eurocentric imagination of the sea as romantic and metaphorical and the materiality of the sea as a deathbed for racialized and illegalized humans as well as non human populations Space Psychology and Psychiatry Nick Kanas, Dietrich Manzey, 2003 This text deals with psychological

psychiatric and psychosocial issues that affect people who live and work in space Rather than focusng on anecdotal reports and ground based simulation studies it emphasizes the findings from psychological research conducted during actual space missions readable text has previously been found only in scientific journal articles Topics that are discussed include behavioral adaptation to space human performance and cognitive effects crewmember interactions psychiatric responses psychological counter measures related to habitability factors work design selection training and in flight monitoring and support and the impact of expeditionary missions to Mars and beyond universities medical students and residents in psychiatry and aerospace medicine human factors workers in space and aviation professions individuals involved with isolated environments on Earth for example the Antarctic submarines aerospace workers in businesses and space agencies such as NASA and ESA and anyone who is interested in learning the facts about the human side of long duration space missions **Architecture for Astronauts** Sandra Häuplik-Meusburger, 2011-10-18 Living and working in extra terrestrial

habitats means being potentially vulnerable to very harsh environmental social and psychological conditions With the stringent technical specifications for launch vehicles and transport into space a very tight framework for the creation of habitable space is set These constraints result in a very demanding partnership between the habitat and the inhabitant This book is the result of researching the interface between people space and objects in an extra terrestrial environment The evaluation of extra terrestrial habitats in comparison to the user s perspective leads to a new framework comparing these buildings from the viewpoint of human activity It can be used as reference or as conceptual framework for the purpose of

evaluation It also summarizes relevant human related design directions The work is addressed to architects and designers as well as engineers

**Tracking the Franklin Expedition of 1845** Stephen Zorn,2023-08-29 The Franklin Northwest Passage Expedition of 1845 is perhaps the greatest disaster in the history of exploration all 129 men vanished as did the expedition s two ships HMS Erebus and Terror Over the next 150 years searchers found bones clothing and a variety of relics Inuit narratives provided some of the details of what happened to the frozen starving sailors after they deserted their ice locked ships in 1848 Then in 2014 and 2016 Canadian researchers found the sunken wrecks not far from the bleak windswept King William Island in the Arctic At last the mystery of the Franklin Expedition would be solved Or would it This book pulls together the various searchers discoveries the many recent scientific studies that shed light on when how and why the men died and whether in extremis they ate each other and illuminates what we know and what we don t and may never know about the fate of the expedition

*Fundamentals of*

*Space Medicine* Gilles Clément, 2025-03-27 This fundamental 3rd Edition offers a comprehensive overview of performance declines observed in astronauts and cosmonauts throughout various space missions spanning from Gagarin's flight to the Apollo lunar surface activities as well as Space Shuttle landings and long duration stays on board the International Space Station. This evidence forms the basis for identifying risks to crew health and performance during extended space missions as well as for developing countermeasures to mitigate these risks. In this edition you will read how space agencies are currently gearing up for human missions beyond low Earth orbit which necessitates addressing numerous physiological psychological operational and scientific challenges prior to establishing bases on the surface of Moon and Mars. The emerging commercial sub orbital and orbital flight capabilities have captivated both the public and the scientific community. This book also identifies the anticipated hurdles or showstoppers for these space missions and what must be understood to grasp fully the implications and risks for space explorers. Over 650 astronauts from various nations have collectively spent over 184 years in space. Currently the 72nd expedition crew resides on the International Space Station maintaining a continuous human presence since 2000. Investigations during this time have explored issues like bone and muscle health space motion sickness immune function changes crew dynamics and medical challenges such as visual impairment and radiation effects. These studies including those led by Gilles Clément have provided valuable insights into human adaptation to space. *Living in Space* Ph. D. Sherry Bell, 2009-05-01 *Living in Space* is a captivating study across a wide spectrum of the issues that humanity faces as we look beyond our home planet at future needs future business endeavors future learning opportunities and future homes for our children and theirs. The authors who contributed to this volume present us with a wonderful diversity of perspectives including the arts philosophy business science and technology and the story that emerges from their fine writings engages the imagination. These chapters also engage our vision and I hope this book helps us to muster the will and the commitment to proceed with the development of space for the benefit of all humanity as it should be. I hope you enjoy this book as much as I did. Edgar Mitchell Sc D Apollo 14 Astronaut March 26 2009 *Breaking the Mishap Chain* Peter W. Merlin, 2012 This volume contains a collection of case studies of mishaps involving experimental aircraft aerospace vehicles and spacecraft in which human factors played a significant role. In all cases the engineers involved the leaders and managers and the operators i.e. pilots and astronauts were supremely qualified and by all accounts superior performers. Such accidents and incidents rarely resulted from a single cause but were the outcome of a chain of events in which altering at least one element might have prevented disaster. As such this work is most certainly not an anthology of blame. It is offered as a learning tool so that future organizations programs and projects may not be destined to repeat the mistakes of the past. These lessons were learned at high material and personal costs and should not be lost to the pages of history. **A Strategy for Research in Space Biology and Medicine in the New Century** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Space Biology and Medicine, 1998-09-16 Construction of the

international space station scheduled to start in late 1998 ushers in a new era for laboratory sciences in space This is especially true for space life sciences which include not only the use of low gravity as an experimental parameter to study fundamental biological processes but also the study of the serious physiological changes that occur in astronauts as they remain in space for increasingly longer missions This book addresses both of these aspects and provides a comprehensive review of ground based and space research in eleven disciplines ranging from bone physiology to plant biology It also offers detailed prioritized recommendations for research during the next decade which are expected to have a considerable impact on the direction of NASA s research program The volume is also a valuable reference tool for space and life scientists
