the child rather than the child to the school A strong willed small town schoolteacher who ran a one room schoolhouse by the time she was seventeen Pratt came to viscerally reject the teaching methods of her day which often featured a long winded teacher at the front of the room and rows of miserable children sitting on benches nailed to the floor In this persuasive presentation of progressive education Pratt recounts how she founded what is now the dynamic City and Country School in New York City invented the unit blocks that have become a staple in classrooms around the globe and played an important role in reimagining preschool and primary school education in ways that are essential for the tumultuously creative time we live in today Kirkus Reviews

Nature and Nurture in Early Child Development Daniel P. Keating,2010-12-31 For developmental scientists the nature versus nurture debate has been settled for some time Neither nature nor nurture alone provides the answer It is nature and nurture in concert that shape developmental pathways and outcomes from health to behavior to competence This insight has moved far beyond the assertion that both nature and nurture matter progressing into the fascinating terrain of how they interact over the course of development In this volume students practitioners policy analysts and others with a serious interest in human development will learn what is transpiring in this new paradigm from the developmental scientists working at the cutting edge from neural mechanisms to population studies and from basic laboratory science to clinical and community interventions Early childhood development is the critical focus of this volume because many of the important nature nurture interactions occur then with significant influences on lifelong developmental trajectories

Five Constraints on Predicting Behavior Jerome Kagan,2017-08-11 A distinguished psychologist considers five conditions that constrain inferences about the relation between brain activity and psychological processes Scientists were unable to study the relation of brain to mind until the invention of technologies that measured the brain activity accompanying psychological processes Yet even with these new tools conclusions are tentative or simply wrong In this book the distinguished psychologist Jerome Kagan describes five conditions that place serious constraints on the ability to predict mental or behavioral outcomes based on brain data the setting in which evidence is gathered the expectations of the subject the source of the evidence that supports the conclusion the absence of studies that examine patterns of causes with patterns of measures and the habit of borrowing terms from psychology Kagan describes the importance of context and how the experimental setting including the room the procedure and the species age and sex of both subject and examiner can influence the conclusions He explains how subject expectations affect all brain measures considers why brain and psychological data often yield different conclusions argues for relations between patterns of causes and outcomes rather than correlating single variables and criticizes the borrowing of psychological terms to describe brain evidence Brain sites cannot be in a state of fear A deeper understanding of the brain's contributions to behavior Kagan argues requires investigators to acknowledge these five constraints in the design or interpretation of an experiment
