Beach Processes And Sedimentation:

Beach Processes and Sedimentation Paul D. Komar, 1998 Introduces beach processes within an approach that balances an engineering perspective against a purely geological one Provides an up to date review of the current understanding of beach processes as well as applications to solve coastal problems erosion management issues etc Discusses issues related to beach erosion and other processes The second edition of *Beach Processes and Sedimentation* has been updated to include information gathered from two decades of science and engineering in the field reflecting the vast increase in knowledge since the first edition Discusses the rise of coastal zone management as well as patterns of wave transformations and dissipation within the surf zone and how these water motions produce cross shore movements of sediment resulting in beach profile variations An essential reference book for many readers from beach front property owners to politicians contending with beachfront erosion to engineers addressing beachfront reclamation projects

Mechanics of Coastal Sediment Transport J?rgen Freds?e,Rolf Deigaard,1992 This book treats the subject of sediment transport in the marine environment covering transport of non cohesive sediment by waves and current in and outside the surf zone It can be read independently but a background in hydraulics and basic wave mechanics is required It is intended for M Sc and Ph D students The primary aim of the book is to describe the physical processes of sediment transport and how to represent them in mathematical models It does not present a large number of different formulae for the sediment transport rates under various conditions The book can be divided in two main parts in the first the relevant hydrodynamic theory is described in the second sediment transport and morphological development are treated The hydrodynamic part contains a review of elementary theory for water waves chapters on the turbulent wave boundary layer and the turbulent interaction between waves and currents and finally surf zone hydrodynamics and wave driven currents The part on sediment transport introduces the basic concepts critical bed shear stress bed load suspended load and sheet layer near bed concentration effect of sloping bed it treats suspended sediment in waves and current and in the surf zone and current and wave generated bed forms Finally the modelling of cross shore and long shore sediment transport is described together with the development of coastal profiles and coastlines
