“THE BEAKS OF FINCHES” LAB

INTRODUCTION

Environmental conditions act as selecting agents because they select organisms with the most beneficial traits to become the parents of the next generation. Within a species, individuals with variations that make them better adapted to their environment will survive and reproduce in greater numbers than those without such adaptations. Observations have shown that the offspring of better-adapted individuals inherit many of their parents' favorable variations.

Finches are small birds found in many locations throughout the world. Charles Darwin used the numerous finch species found on the Galapagos Islands as evidence of natural selection. The great variety of beak adaptations present on the Galapagos is thought to be due to the isolation of bird populations on the islands with different kinds and amounts of food. Seed-eating finches exhibit a great number of differences in beak shapes and sizes. During ongoing competition for resources, some finches are successful and become more numerous, while less successful finches decrease in number.

In this laboratory activity, you will work with different tools that will serve to model finch “beaks”. The seeds provided represent finch food on a particular island. You will compete with other “finch” species to see which “beak” is best adapted for obtaining a specific food.

Figure 1. Variations in Beaks of Galapagos Islands Finches

HYPOTHESIS:

1. Examine the different tools (“beaks”) and seeds provided. Predict which “beak” will be the *most* successful at picking up small seeds. Give the reasons for your choice.

2. Predict which “beak” will be the *least* successful at picking up small seeds. Give the reasons for your choice.

ROUND ONE: No Competition, Original Island

- When given the “Round One” signal, one member of your team should use the “beak” to pick up small seeds one at a time from the large dish and place them in the small dish. Repeat this for a total of four trials, two trials for each partner. A timekeeper will tell you when to start and stop each trial. Record your results in the “Round One: Feeding with No Competition” data table.

The Biologist's Imagination William R. Hoffman, Leo Furcht, 2014 Discusses the history of technological innovation in the biosciences *Fisheries and aquaculture genetics* Yuzine Esa, Siti Nor, Md Samsul Alam, Nguyen Hong Nguyen, 2023-07-05 Evolution Evolving Kevin N. Lala, Tobias Uller, Nathalie Feiner, Marcus Feldman, Scott F. Gilbert, 2024-09-24 A new account of the central role developmental processes play in evolution A new scientific view of evolution is emerging one that challenges and expands our understanding of how evolution works Recent research demonstrates that organisms differ greatly in how effective they are at evolving Whether and how each organism adapts and diversifies depends critically on the mechanistic details of how that organism operates its development physiology and behavior That is because the evolutionary process itself has evolved over time and continues to evolve The scientific understanding of evolution is evolving too with groundbreaking new ways of explaining evolutionary change In this book a group of leading biologists draw on the latest findings in evolutionary genetics and evolution as well as novel insights from studies of epigenetics symbiosis and inheritance to examine the central role that developmental processes play in evolution Written in an accessible style and illustrated with fascinating examples of natural history the book presents recent scientific discoveries that expand evolutionary biology beyond the classical view of gene transmission guided by natural selection Without undermining the central importance of natural selection and other Darwinian foundations new developmental insights indicate that all organisms possess their own characteristic sets of evolutionary mechanisms The authors argue that a consideration of developmental phenomena is needed for evolutionary biologists to generate better explanations for adaptation and biodiversity This book provides a new vision of adaptive evolution

Modes of Learning George Allan, 2012-05-18 Educators are familiar with Alfred North Whitehead's three stages of education: romance, precision, and generalization. Philosophers are familiar with his metaphysical theories about the primacy of temporal processes. In *Modes of Learning*, George Allan brings these two sides of Whitehead's thought together for the first time in a book suitable for both those initially approaching Whitehead's metaphysics and experts alike. Allan develops a series of analogies between Whitehead's ideas about how we learn and key concepts in his later metaphysical writings, demonstrating that both how we learn and how the world changes involve a tension between open-ended exploration and systematic organization. Novel ideas free us from the blinders imposed by old habits and beliefs. Yet only when these ideas are integrated with the old ways are we able to improve our individual and collective lives until changing circumstances call for further new ideas and fresh integrations. Using a rich variety of examples, Allan illuminates the metaphysical ideas he explores by tethering them concretely to the educational practices in which they are rooted. This shows a key but neglected feature of Whitehead's thought: his pragmatic theory of truth with its functionalist approach to experience and its humanistic appreciation of the frailty of all human endeavors.

Annual Editions Elvio Angeloni, 2006-10 This book contains a variety of articles on contemporary issues in social and cultural anthropology. In contrast to the broad range of topics and minimum depth typical of standard textbooks, this anthology provides an opportunity to read firsthand accounts by anthropologists of their own research. The articles have been chosen for the purpose of supplementing the standard textbook in cultural anthropology that is used in introductory classes.

Epigenetics Benedikt Hallgrímsson, Brian K. Hall, 2011-04-11 If you want to understand evolution, you need to understand the murky world of epigenetics. A hearty congratulations should be paid to Hallgrímsson and Hall who provide reliable and steady illumination.
