Brain-Computer-Interfaces in their ethical, social and cultural

contexts Gerd Grüber, Elisabeth Hildt, 2014-06-30 This volume summarizes the ethical social and cultural contexts of interfacing brains and computers It is intended for the interdisciplinary community of BCI stakeholders Insofar engineers neuroscientists psychologists physicians care givers and also users and their relatives are concerned For about the last twenty years brain computer interfaces BCIs have been investigated with increasing intensity and have in principle shown their potential to be useful tools in diagnostics rehabilitation and assistive technology The central promise of BCI technology is enabling severely impaired people in mobility grasping communication and entertainment Successful applications are for instance communication devices enabling locked in patients in staying in contact with their environment or prostheses enabling paralysed people in reaching and grasping In addition to this it serves as an introduction to the whole field of BCI for any interested reader *Schizophrenia Bulletin*, 2010 **Time: A to Z Health Guide** Editors of Time Magazine, 2005-01-03 A to Z guide Inter- and Intra-subject Variability in Brain Imaging and Decoding Tzyy-Ping Jung, Corey J. Keller, Junhua Li, Yuan-Pin Lin, Masaki Nakanishi, Johanna Wagner, Chun-Shu Wei, Wei Wu, Yu Zhang, 2022-01-19 Converging Clinical and Engineering Research on Neurorehabilitation José L Pons, Diego Torricelli, Marta Pajaro, 2013-02-19 Restoring human motor and cognitive function has been a fascinating research area during the last century Interfacing the human nervous system with electro mechanical rehabilitation machines is facing its crucial passage from research to clinical practice enhancing the potentiality of therapists clinicians and researchers to rehabilitate diagnose and generate knowledge The 2012 International Conference on Neurorehabilitation ICNR2012 brings together researchers and students from the fields of Clinical Rehabilitation Applied Neurophysiology and Biomedical Engineering covering a wide range of research topics Clinical Impact of Technology Brain Computer Interface in Rehabilitation Neuromotor Neurosensory modeling and processing Biomechanics in Rehabilitation Neural Prostheses in Rehabilitation Neuro Robotics in Rehabilitation Neuromodulation This Proceedings book includes general contributions 2 page extended abstracts from oral and poster sessions as well as from special sessions A section is also dedicated to pre post conference workshops including invited contributions from internationally recognized researchers A selection of most relevant papers have been considered for publication in international journals e g JNER JACCES therefore they will appear soon in their extended versions in Special Issues These Proceedings also contain brief descriptions of keynote lectures from invited world class professors and a number of thematic round tables covering technological and institutional issues **Brain-Computer Interfaces** Jonathan Wolpaw, Elizabeth Winter Wolpaw, 2012-01-24 In the last 15 years a recognizable surge in the field of Brain Computer Interface BCI research and development has emerged This emergence has sprung from a variety of factors For one inexpensive computer hardware and software is now available and can support the complex high speed analyses of brain activity that is essential is BCI Another factor is the greater understanding of the central nervous system including the abundance of new information on the nature and functional correlates of brain signals and improved methods for recording

these signals in both the short term and long term And the third and perhaps most significant factor is the new recognition of the needs and abilities of people disabled by disorders such as cerebral palsy spinal cord injury stroke amyotrophic lateral sclerosis ALS multiple sclerosis and muscular dystrophies The severely disabled are now able to live for many years and even those with severely limited voluntary muscle control can now be given the most basic means of communication and control because of the recent advances in the technology research and applications of BCI This book is intended to provide an introduction to and summary of essentially all major aspects of BCI research and development Its goal is to be a comprehensive balanced and coordinated presentation of the field s key principles current practice and future prospects

Using Neurophysiological Signals that Reflect Cognitive or Affective State Anne-Marie Brouwer, Thorsten O. Zander, Jan B. F. van Erp, 2015-07-27 What can we learn from spontaneously occurring brain and other physiological signals about an individual s cognitive and affective state and how can we make use of this information One line of research that is actively involved with this question is Passive Brain Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative output channel as opposed to more common human output channels like speech and moving the hands However brain signals possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones they can potentially provide continuous online information about an individual s cognitive and affective state without the need of conscious or effortful communication The provided information could be used in a number of ways Examples include monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to errors to correct for a behavioral response While Passive BCIs make use of online neuro physiological responses and close the interaction cycle between a user and a computer system neuro physiological responses can also be used in an offline fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as indicators of mental effort for optimizing information systems The described field of applied neuro physiology can strongly benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we aimed to publish studies of the highest scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved Connected to the Research Topic was a workshop held on June 6 during the Fifth International Brain

Computer Interface Meeting June 3 7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic
