Beaches Of The Gulf Coast Jr Davis Richard A:

Living Beaches of the Gulf Coast Blair Witherington, Dawn Witherington, 2022-12-01 Texas Louisiana Mississippi Alabama and the Florida Panhandle beckon curious beachcombers with miles of wave swept Gulf coastline These beaches offer more than a sandy stroll amidst stunning scenery they are alive As ever changing ribbons of sand these beaches foster unique life forms and accept beguiling castaways from a vast marine wilderness Mysteries abound What is this odd creature Why does the beach look this way How did this strange item get here Living Beaches of the Gulf Coast satisfies a beachcomber's curiosity within a comprehensive yet easily browsed guide The guide is written in a familiar style and is illustrated with distribution maps and hundreds of color photos Accounts include beach anatomy coastal phenomena and shoreline animals plants and geology Hundreds of seashells are depicted as well as other interesting animals flowers historical structures beach sands and beach art The authors suggest a variety of beach scavenger hunts and recommend hints for beachcombing success

Managing the Gulf Coast Using Geology and Engineering Richard A. Davis Jr., Nicole Elko, Ping Wang, 2018-09-27 This book looks at coastal management as it applies to the physical barrier inlet system of the Gulf of Mexico This is an excellent region for considering this topic because it has a wide range of situations to be considered in its management remote areas huge urban populations and tidal inlets including some natural some dredged and others that have been structured for more than a century Discussing options for managing and protecting the various elements of the barrier inlet system the authors consider each approach in terms of costs logistics and success or failure They extensively cover anthropogenic impact as well as management problems generated by natural processes especially hurricanes and other severe storms The authors discuss the impact of management decisions and related projects providing decision makers with the proper information to make decisions on zoning development construction of major structures environmental concerns etc

Coastal Sedimentary Environments R.A. Jr. Davis, 2012-12-06 Richard A Davis The zone where land and sea meet is composed of a variety of complex environments The coastal areas of the world contain a large percentage of its population and are therefore of extreme economic importance Industrial residential and recreational developments as well as large urban complexes occupy much of the coastal margin of most highly developed countries Undoubtedly future expansion in many undeveloped maritime countries will also be concentrated on coastal areas Accompanying our occupation of coasts in this age of technology is a dependence on coastal environments for transportation food water defense and recreation In order to utilize the coastal zone to its capacity and yet not plunder its resources we must have extensive knowledge of the complex environments contained along the coasts The many environments within the coastal zone include bays estuaries deltas marshes dunes and beaches A tremendously broad range of conditions is represented by these environments Salinity may range from essentially fresh water in estuaries such as along the east coast of the United States to extreme hypersaline lagoons such as Laguna Madre in Texas Coastal environments may be in excess of a hundred meters deep fjords or may

extend several meters above sea level in the form of dunes Some coastal environments are well protected and are not subjected to high physical energy except for occasional storms whereas beaches and tidal inlets are continuously modified by waves and currents

Beaches of the Gulf Coast Richard A. Davis, 2014-02-12 Much of the world's population lives within thirty miles of a coast and beaches are perhaps the most popular tourist destinations worldwide The Gulf of Mexico is no exception Millions of people make their homes nearby and many of them spend considerable time at the beach joined by millions more tourists and seasonal visitors In *Beaches of the Gulf Coast* Richard A Davis Jr a veteran coastal geologist explores the dynamics of beach formation providing the reader with a basic understanding of the characteristics and behavior of the beach environment and what causes it to change He compares natural beach environments with those that have experienced human intervention and he profiles many of the common plants and animals that grow and live on and adjacent to the beach Following the coastline from the Florida Keys around the Gulf Coast to Varadero Beach in Cuba Davis describes the major characteristics of beaches in each US state with a final chapter on Mexico and Cuba Focusing on public beaches Davis emphasizes the special features of the beaches indicating whether and how they are nourished either naturally or artificially and pointing out which beaches have problems and which ones are doing well Including photographs satellite images charts and maps that reveal the natural processes of beach formation and erosion Davis showcases the beauty of some of the Gulf's best beaches both popular and remote *Beaches of the Gulf Coast* provides a broad range of basic knowledge for all who own beachfront property who live near the beach or who simply love the beach and want a better understanding of this special coastal environment

Geology of Holocene Barrier Island Systems Richard A. Jr. Davis, 2012-12-06 Barrier islands represent a complex coastal system that includes a number of different sedimentary depositional environments nearshore zone beach dunes washover fans marshes tidal flats estuaries lagoons and tidal inlets The morphodynamics of these fragile coastal systems provide a further complication to this coastal type Although barrier islands comprise only 15% of the world's coastline they have received a far greater proportion of attention from the scientific and engineering community and more recently from coastal managers and environmentalists Modern barrier islands are arguably the most expensive and most vulnerable of all coastal environments Pressure from developers for residential industrial and recreational development has caused most of our barriers to become significantly impacted by human activity especially over the past few decades These pressures have led to extensive preservation of natural barriers through efforts from all levels of government and also by private organizations Governments have also formed coastal management programs that help to control any future development with the intent being to keep human activity compatible with barrier island morphodynamics In order to devise appropriate coastal zone management programs it is necessary to have a comprehensive understanding of the morphodynamics of barrier island systems This volume provides comprehensive details on barrier island morphology sediment distribution and the process response mechanisms that cause changes to both These

are the important aspects of barrier systems that can provide important input into the development and implementation of coastal management programs
