is also time to take stock of what has made the discipline the field it presents itself as today As horizontal diversification we can identify trends that involve a continued inclusion of more fields of study into the family of methods and approaches of ELT Especially in the technical sense e learning has matured and new forms of online learning and teaching have emerged be it via teleconferences or short message services for vocabulary training However a massive extension has occurred within the so called social media The vertical dimension affects a depth of analysis not seen even a decade ago when for example small and relatively simple learner corpora were used for linguistic analysis that rarely went beyond rote frequency counts The increasing sophistication in these two dimensions is also reflected in the research papers collected in this volume

The Cambridge Handbook of English Corpus Linguistics Douglas Biber, Randi Reppen, 2015-06-25 The Cambridge Handbook of English Corpus Linguistics CHECL surveys the breadth of corpus based linguistic research on English including chapters on collocations phraseology grammatical variation historical change and the description of registers and dialects The most innovative aspects of the CHECL are its emphasis on critical discussion its explicit evaluation of the state of the art in each sub discipline and the inclusion of empirical case studies While each chapter includes a broad survey of previous research the primary focus is on a detailed description of the most important corpus based studies in this area with discussion of what those studies found and why they are important Each chapter also includes a critical discussion of the corpus based methods employed for research in this area as well as an explicit summary of new findings and discoveries

Progressives, Patterns, Pedagogy Ute Römer, 2005-01-01 This book presents a large scale corpus driven study of progressives in real English and school English combining an analysis of general linguistic interest with a pedagogically motivated one A systematic comparative analysis of more than 10 000 progressive forms taken from the largest existing corpora of spoken British English and from a small corpus of EFL textbook texts highlights numerous differences between actual language use and textbook language concerning the distribution of progressives their preferred contexts favoured functions and typical lexical grammatical patterns On the basis of these differences a number of pedagogical implications are derived the integration of which then leads to a first draft of an innovative concept of teaching progressives a concept which responds to three key criteria in pedagogical description typicality authenticity and communicative utility The analysis also demonstrates that many existing accounts of the progressive are inappropriate in several respects and that not enough attention is being paid to lexical grammatical relations Winner of the Wissenschaftspreis Hannover 2006 for outstanding research monographs
