Structural Equation Modeling Bruce H. Pugesek, Adrian Tomer, Alexander von Eye, 2003-01-23 Structural equation modelling SEM is a technique that is used to estimate analyse and test models that specify relationships among variables The ability to conduct such analyses is essential for many problems in ecology and evolutionary biology This book begins by

explaining the theory behind the statistical methodology including chapters on conceptual issues the implementation of an SEM study and the history of the development of SEM The second section provides examples of analyses on biological data including multi group models means models P technique and time series The final section of the book deals with computer applications and contrasts three popular SEM software packages Aimed specifically at biological researchers and graduate students this book will serve as valuable resource for both learning and teaching the SEM methodology Moreover data sets and programs that are presented in the book can also be downloaded from a website to assist the learning process

The Essence of Multivariate Thinking Lisa L. Harlow, 2014-02-18 By focusing on underlying themes this book helps readers better understand the connections between multivariate methods For each method the author highlights the similarities and differences between the methods when they are used and the questions they address the key assumptions and equations and how to interpret the results The concepts take center stage while formulas are kept to a minimum Examples using the same data set give readers continuity so they can more easily apply the concepts Each method is also accompanied by a worked out example SPSS and SAS input and an example of how to write up the results EQS code is used for the book s SEM applications This extensively revised edition features New SEM chapters including an introduction ch 10 path analysis ch 11 confirmatory factor analysis ch 12 and latent variable modeling ch 13 the last three with an EQS application A new chapter on multilevel modeling ch 8 that is now used more frequently in the social sciences More emphasis on significance tests effect sizes and confidence intervals to encourage readers to adopt a thorough approach to assessing the magnitude of their findings A new data set that explores the work environment More discussion about the basic assumptions and equations for each method for a more accessible approach New examples that help clarify the distinctions between methods A new website at <https://sites.google.com/site/multivariate2ndedition/> that features the datasets for all of the examples in the book for use in both SPSS and SAS and in EQS for the SEM chapters The first two chapters review the core themes that run through most multivariate methods The

author shows how understanding multivariate methods is much more achievable when we notice the themes that underlie these statistical techniques This multiple level approach also provides greater reliability and validity in our research After providing insight into the core themes the author illustrates them as they apply to the most popular multivariate methods used in the social and behavioral sciences First two intermediate methods are explored multiple regression and analysis of covariance Next the multivariate grouping variable methods of multivariate analysis of variance discriminant function analysis and logistic regression are explored Next the themes are applied to multivariate modeling methods including multilevel modeling path analysis confirmatory factor analysis and latent variable models that include exploratory structural methods of principal component and factor analysis The book concludes with a summary of the common themes and how they pertain to each method discussed in this book Intended for advanced undergraduate and or graduate courses in multivariate statistics taught in psychology education human development business nursing and other social and life sciences researchers also appreciate this book s applied approach Knowledge of basic statistics research methods basic algebra and finite mathematics is recommended

Achievement Motivation in the Leadership Role of

Extension Agents Maimunah Ismail,Roya Karami,2014-07-24 This book is relevant to the practice and theory of agricultural extension In the current context of significant changes in thinking policy and expectations these changes require extension agents to respond to challenges in developing leadership skills to support and encourage changes at farm and household levels The book has identified the background personal and environmental factors influencing achievement motivation in the leadership role of extension agents The background factors are primary dimensions of diversity and are less amenable to change exert significant impacts and shape our basic self image sense of identity and early learning experiences Researchers often ignore the interdependence of the background factors with other secondary dimensions of diversity in which the latter are changeable personal characteristics that are acquired and may be modified or abandoned throughout life Although the secondary dimensions of diversity are more controllable they will be affected by other people s decisions which in this book we see as environmental factors The reliability and applicability of the above mentioned theoretical discussions have been tested in an original study involving extension agents in Iran
