Graham M. Simons,2021-03-15 An in depth history of the controversial airplane from its design development and service to politics power struggles and more The Boeing 737 is an American short to medium range twinjet narrow body airliner developed and manufactured by Boeing Commercial Airplanes a division of the Boeing Company Originally designed as a shorter lower cost twin engine airliner derived from the 707 and 727 the 737 has grown into a family of passenger models with capacities from 85 to 215 passengers the most recent version of which the 737 MAX has become embroiled in a worldwide controversy Initially envisioned in 1964 the first 737 100 made its first flight in April 1967 and entered airline service in February 1968 with Lufthansa The 737 series went on to become one of the highest selling commercial jetliners in history and has been in production in its core form since 1967 the 10 000th example was rolled out on 13 March 2018 There is however a very different side to the convoluted story of the 737 s development one that demonstrates a transition of power from a primarily engineering structure to one of accountancy number driven powerbase that saw corners cut and the previous extremely high safety methodology compromised The result was the 737 MAX Having entered service in 2017 this model was grounded worldwide in March 2019 following two devastating crashes In this revealing insight into the Boeing 737 the renowned aviation historian Graham M Simons examines its design development and service over the decades since 1967 He also explores the darker side of the 737 s history laying bare the politics power struggles changes of management ideology and battles with Airbus that culminated in the 737 MAX debacle that has threatened Boeing s very survival [Air Crash Investigations: The Plane That Vanished, the Crash of Adam Air Flight 574](#)

the same period Firstly in terms of traditional territorial sovereignty we have arrived at a point where there is a concept of data sovereignty and ownership that raises issues of privacy Data transmission becomes ambivalent in terms of territorial sovereignty and the Westphalian model may not be the perfect answer Whether it be the manufacture of airplanes the transfer of data on individuals or the transmission of aeronautical and telecommunications information all have to be carried out in accordance with the same fundamental principle duty of care Against the backdrop of the relevant provisions of the Chicago Convention and its Annexes the detailed analysis presented here covers key areas such as megatrends AI and international law in the digital age blockchain and aviation drones aviation and telecommunications aviation and the Internet cybersecurity and digital identification of passengers privacy In turn the book suggests how we can best manage this transition
