System-Ergonomic Design of Cognitive Automation Reiner Onken,Axel Schulte,2010-01-06 Why this book Simply because it is due Cognitive automation and its system ergonomic introduction into work systems have been advanced in the meantime to such a degree that already applications for operational work systems are slowly becoming reality This book shall contribute to give system designers some more guidelines about designing work systems and associated cognitive machines effectively in particular those related to guidance and control of manned and unmanned vehicles The issue is that the findings on cognition have to become sufficient commonsense for all from the various disciplines involved in system design and that guidelines are given how to make use of it in an appropriate and systematic manner These guidelines are to account for both the needs of the human operator in the work process and the use of computational potentials to make the work system a really most effective one In other words this book is meant to provide guidelines for the organisational and technical design of work systems Therefore this book is an interdisciplinary one Findings in individual disciplines are not the main issue It is rather the combination of these findings for the sake of the performance of work systems which makes this book a useful one for designers who are interested in this modern approach and its implementation

Human Factors Methods Neville Stanton,Paul M. Salmon,Laura A. Rafferty,2013 This second edition of Human Factors Methods A Practical Guide for Engineering and Design now presents 107 design and evaluation methods including numerous refinements to those that featured in the original The book acts as an ergonomics methods manual aiding both students and practitioners Offering a how to text on a substantial range of ergonomics methods the eleven sections represent the different categories of ergonomics methods and techniques that can be used in the evaluation and design process

Intelligent Adaptive Systems Ming Hou, Simon Banbury, Catherine Burns, 2018-10-30 As ubiquitous as the atmosphere intelligent adaptive systems IASs surround us in our daily lives When designed well these systems sense users and their environments so that they can provide support in a manner that is not only responsive to the evolving situation but unnoticed by the user A synthesis of recent research and developments on IASs from the human factors HF and human computer interaction HCI domains Intelligent Adaptive Systems An Interaction Centered Design Perspective provides integrated design guidance and recommendations for researchers and system developers The book explores a recognized lack of integration between the HF and HCI research communities which has led to inconsistencies between the research approaches adopted and a lack of exploitation of research from one field by the other The authors integrate theories and methodologies from these domains to provide design recommendations for human machine developers They then establish design guidance through the review of conceptual frameworks analytical methodologies and design processes for intelligent adaptive systems The book draws on case studies from the military medical and distance learning domains to illustrate intelligent system design to examine lessons learned Outlining an interaction centered perspective for designing an IAS the book details methodologies for understanding human work in complex environments and offers understanding about why and how optimizing human machine interaction should be central to the design of IASs The authors present an analytical and design methodology as well as an implementation strategy that helps you choose the proper design framework for your needs

Aviation Automation Charles E. Billings, 2018-01-29 The advent of very compact very powerful digital computers has made it possible to automate a great many processes that formerly required large complex machinery Digital computers have made possible revolutionary changes in industry commerce and transportation This book an expansion and revision of the

author's earlier technical papers on this subject describes the development of automation in aircraft and in the aviation system its likely evolution in the future and the effects that these technologies have had and will have on the human operators and managers of the system. It suggests concepts that may be able to enhance human machine relationships in future systems. The author focuses on the ability of human operators to work cooperatively with the constellation of machines they command and control because it is the interactions among these system elements that result in the system's success or failure whether in aviation or elsewhere. Aviation automation has provided great social and technological benefits but these benefits have not come without cost. In recent years new problems in aircraft have emerged due to failures in the human machine relationship. These incidents and accidents have motivated this inquiry into aviation automation. Similar problems in the air traffic management system are predicted as it becomes more fully automated. In particular incidents and accidents have occurred which suggest that the principle problems with today's aviation automation are associated with its complexity coupling autonomy and opacity. These problems are not unique to aviation they exist in other highly dynamic domains as well. The author suggests that a different approach to automation called human centered automation offers potential benefits for system performance by enabling a more cooperative human machine relationship in the control and management of aircraft and air traffic.
