 Taniguchi,Takashi Oguchi,2024-12-01 This open access book gives comprehensive empirical insights on connected and
 automated driving CAD of road transport vehicles which leads to the driver being partially or completely replaced by
 automation The current trend towards widespread research and development of automation of motorised individual transport
 is driven by the expected benefits such as increased road safety smoother traffic flow reduction of congestion or use of
 driving time for other activities CAD has the potential to change several dimensions of the transport system ranging from
 changes in car ownership to the availability of entirely new mobility services Some proponents even expect CAD to
 revolutionise the current transport system as a whole In order to make informed statements about the possible impact of
 CAD on transport systems research must consider a wide range of open questions In what way do the existing framework
 conditions of the prevailing mobility systems affect the impact of CAD How does the governance style relate to regulatory
 changes and resource allocation in the development of CAD Is an autonomous ride hailing service really a profitable business
 case What are the attitudes and expectations towards CAD in the general public What are the effects of CAD on transport
 systems What are other impacts of CAD that should be assessed All of these questions were addressed within different
 projects as part of the Japanese German Research Cooperation on CAD and can be discovered by the reader of this book
