This book offers up-to-date information on the recording and analysis of respiratory sounds that will assist in clinical routine. The book is of high educational value and represents an excellent learning tool at pre and postgraduate levels. It will also appeal to researchers as it provides comprehensive summaries of knowledge in particular research fields. The editors bring high-level expertise to the subject, including membership of the European Respiratory Society Task Force on the standardization of categories and nomenclature for breath sounds.

**Novel Technologies in the Diagnosis and Management of Sleep-disordered Breathing** Henri Korkalainen, Ding Zou, 2024-03-13. Sleep-disordered breathing, ranging from habitual snoring to severe obstructive sleep apnea, is highly prevalent and represents a growing global healthcare burden. Besides disrupting sleep, sleep-disordered breathing leads to detrimental outcomes such as excessive daytime sleepiness, neurocognitive impairment, and increased cardiometabolic morbidities. The gold standard diagnostic procedures, e.g., in-lab polysomnography, are cumbersome, and standard parameters derived from sleep studies often yield poor long-term prognostic value. Hence, there is a need for innovative diagnostic technologies and novel sleep metrics to enable simple diagnosis and tailored disease management.
