Robotic Welding, Intelligence and Automation Tzyh-Jong Tarn,Shan-Ben Chen,Changjiu Zhou,2007-09-11 Robotic welding systems have been used in different types of manufacturing They can provide several benefits in welding applications The most prominent advantages of robotic welding are precision and productivity Another benefit is that labor costs can be reduced Robotic welding also reduces risk by moving the human welder operator away from hazardous fumes and molten metal close to the welding arc The robotic welding system usually involves measuring and identifying the component to be welded we ing it in position controlling the welding parameters and documenting the produced welds However traditional robotic welding systems rely heavily upon human interv tion It does not seem that the traditional robotic welding techniques by themselves can cope well with uncertainties in the welding surroundings and conditions e g variation of weld pool dynamics fluxion solid weld torch and etc On the other hand the advent of intelligent techniques provides us with a powerful tool for solving demanding re world problems with uncertain and unpredictable environments Therefore it is intere ing to gather current trends and to provide a high quality forum for engineers and researchers working in the filed of intelligent techniques for robotic welding systems This volume

Architectures for Adaptive Software Systems Raffaella Mirandola, Ian Gorton, Christine Hofmeister, 2009-06-18 Much of a software architect's life is spent designing software systems to meet a set of quality requirements General software quality attributes include scalability security performance or reliability Quality attribute requirements are part of an application's non functional requirements which capture the many facets of how the functional requirements of an application are achieved Understanding modeling and continually evaluating quality attributes throughout a project lifecycle are all complex engineering tasks which continue to challenge the software engineering scientific community While we search for improved approaches methods formalisms and tools that are usable in practice and can scale to large systems the complexity of the applications that the software industry is challenged to build is ever increasing Thus as a research community there is little opportunity for us to rest on our laurels as our innovations that address new aspects of system complexity must be deployed and validated To this end the 5th International Conference on the Quality of Software Architectures QoSA 2009 focused on

architectures for adaptive software systems Modern software systems must often reconfigure their structure and behavior to respond to continuous changes in requirements and in their execution environment In these settings quality models are helpful at an architectural level to guide systematic model driven software development strategies by evaluating the impact of competing architectural choices *Proceedings*, 2002
