Anan'ev,1992-01-01 Professor Yurii A Anan'ev has a long standing international reputation for his publications on optical beams and resonators Now many of his contributions will be readily available for the first time in a book The generation of maximum power minimum divergence beams from laser resonators is probably the most important topic in quantum electronics and optics today The only book of its kind *Laser Resonators and the Beam Divergence Problem* covers not only the theory but also the applications of resonators to real systems as opposed to idealized models Each rigorous examination of an optical configuration is accompanied by a detailed discussion of its associated applications and of the considerations for the user in practical work The book contains a wealth of information on the developments in resonator technology including much material previously unavailable outside the Soviet Union It is an essential reference source to every researcher in laser science and technology

The Optics Encyclopedia Thomas Gordon Brown,2004

KDP - Family Single Crystals L.N Rashkovich,2021-12-16 The KDP family of single crystals is composed of compounds of alkali metals with light or heavy hydro deuterio water and oxides of phosphate or arsenate including ammonium potassium rubidium and caesium dihydro and dideutero phosphates and similar arsenates While not occurring in nature their production exceeds that of any other water soluble crystals and the demand for bigger and more optically pure crystals is ever increasing *KDP Family Single Crystals* is a comprehensive investigation of the crystallization mechanism for these systems The first part of the book collects the majority of the available data on the physico chemical analysis of these systems This is complemented by a review of contemporary concepts related to the crystal growth dislocation mechanism under the influence of impurities changing supersaturation and temperature This is not only relevant to the growth of KDP single crystals but to the majority of crystals grown from low and high temperature solutions Finally attention is given to the

important problem of speeding up the production processes for the growth of these crystals while maintaining the quality of the crystals The in depth coverage that KDP Family Single Crystals provides to the art of crystal growth techniques makes it an essential reference work for all those working in the field of crystal growth and to those using KDP family crystals in quantum electronics devices *The Optical Constants of Bulk Materials and Films*, Leslie Ward,1988 Very Good No Highlights or Markup all pages are intact *Super-radiance* M.G Benedict,2018-03-29 Super radiance Multiatomic Coherent Emission provides a comprehensive self contained account of the theory and experiments of the quantum optic phenomenon of superradiance Contributed by highly regarded researchers in the field the book first presents the theory of superradiance at a level suitable for graduate physicists approaching the subject for the first time This introduction is followed by a more rigorous treatment that is supported by the analysis of experiments dealing with superradiance and by a discussion on the possible uses of the effect in other areas of optics and electronics The theoretical and experimental results presented in this book will introduce a wide audience to this important area of quantum optics **Principles of Adaptive Optics** Robert Tyson,2010-09-14 Since the publication of the second edition of Principles of Adaptive Optics the developments and applications in this area have increased tremendously Observatories are now producing outstanding science through adaptive optics technology components such as micromachined deformable mirrors and very low noise detectors are revolutionizing the f *Cutting and Polishing Optical and Electronic Materials*, Geoffrey Wilfred Fynn,Wilfred James Albert Powell,1988 A practical hands on guide to the machining of precision optical surfaces on optical electronic materials It enables readers to construct use equipment in their own production laboratories Primarily intended for technicians working with optical electronic materials it is also relevant to optical devices metallography ceramics geology gemstones metrology production engineering **Laser Heating of Metals** A. M. Prokhorov,2018-01-31 In order to ensure efficient use of lasers and for any large scale implementation a thorough knowledge of the fundamental laws governing the interaction of radiation with matter is required Laser Heating of Metals provides a systematic and comprehensive presentation of the fundamental principles underlying the physical and chemical mechanisms governing the interaction of laser radiation with solid targets and in particular metals in gaseous environments for a wide range of beam parameters The authors have been active in the field of interactions between lasers and materials for many years and this book summarises the results of their work in particular concerning the action of CO₂ lasers on metals These results are then discussed at some length Laser Heating of Materials will be of interest to scientists at all levels with an interest in the interaction of radiation with condensed matter and in particular to those involved in laser cutting and welding etc and metal working **Handbook of Optical Systems, Volume 2** Wolfgang Singer,Michael Totzeck,Herbert Gross,2006-05-12 The state of the art full colored handbook gives a comprehensive introduction to the principles and the practice of calculation layout and understanding of optical systems and lens design Written by reputed industrial experts in the field this text introduces the user to the basic properties of optical
