Materials The Technical Drawing 101 with AutoCAD textbook and included student and instructor materials are a complete semester's curriculum. Instructors receive an instructor's manual, lecture materials, check prints of AutoCAD dwg files, prototype drawings for assignments, a syllabus, tests, quizzes, answer keys, and sketching and traditional drafting files in doc and PDF format. With the textbook, students gain access to an extensive library of video tutorials. They also receive AutoCAD prototype drawings for each CAD assignment, lettering practice sheets, and multi-view sketching grid sheets in PDF format.

Broad Appeal Students taking introductory technical drawing classes usually have diverse career interests. Traditional technical drawing texts which focus solely on mechanical drawing projects hold little interest for these students, so Technical Drawing 101 with AutoCAD includes projects in which students create working drawings for a mechanical assembly as well as for an architectural project. Learners will master these topics with the same clear instruction and step-by-step process that is featured in the rest of the textbook. The newly added chapter on civil drafting touches on types of civil drawings, civil bearings, courses, and units, and concludes with a mortgage survey project. Another brand new chapter on electrical and electronics drafting explains the types of working drawings and graphics found in this field: circuits, symbols, and components, and schematic diagrams, followed by an FM tuner project. The inclusion of these chapters helps capture the interest of more students while adding even more multidisciplinary appeal to the text.

Video Tutorials The video tutorials that are included with this textbook are designed to get students comfortable with the user interface and demonstrate how to use many of AutoCAD's commands and features. The videos progress to more advanced topics that walk students through completing several of the projects in the book. Icons throughout the book alert learners to times when they should access downloads and videos.

*Technical Drawing 101 with AutoCAD 2020* Ashleigh Fuller, Antonio Ramirez, Douglas Smith, 2019-06

Technical Drawing 101 covers topics ranging from the most basic, such as making freehand multiview sketches of machine parts, to the advanced, creating an AutoCAD dimension style containing the style settings defined by the ASME Y14.5 2009 Dimensioning and Tolerancing standard. But unlike the massive technical drawing reference texts on the market, Technical Drawing 101 aims to present just the right mix of information and projects that can be reasonably covered by faculty and assimilated by students in one semester. Both mechanical and architectural projects are introduced to capture the interest of more students and to offer a broader appeal. The authors have also created extensive video training: 120 videos, 17 hours total, that is included with every copy of the book. In these videos, the authors start off by getting students comfortable with the user interface and demonstrating how to use many of AutoCAD's commands and features. The videos progress to more advanced topics where the authors walk students through completing several of the projects in the book. The CAD portion of the text incorporates drafting theory whenever possible and covers the basics of drawing setup, units, limits, and layers, the tools of the Draw, Modify, and Dimension toolbars, and the fundamentals of 3D modeling. By focusing on the fundamental building blocks of CAD, Technical Drawing 101 provides a solid foundation for students going on to learn advanced CAD concepts and

**Standard Letters in Architectural Practice** David Chappell, 2008-04-15. Architects and contract administrators spend a great deal of time writing letters of various types. Many of them are routine and repetitive in character but they require proper consideration if potentially dangerous liability situations are to be avoided. This book provides some 285 standard letters for use at all stages of project administration. To assist the user, they are grouped into sections which correspond with the RIBA Plan of Work. The aim is to cover all the common situations encountered in practice. The book has been revised to take account of the latest contract revisions and many letters have been added. Unless otherwise stated, all letters are suitable for use with JCT 98, WCD 98, IFC 98, MW 98, GC Works 1, 1998. The latest edition also takes account of the three new RIBA Standard Forms of Agreement for Appointment of an Architect: SFA 99, CE 99, and SW 99. Although primarily written for architects and contract administrators, the book will also be of use to project managers and employers' agents under WCD 98. Contractors will also find much of interest.
