

Arctic-Alpine Environments and Tourism: Can Sustainability be Planned? Lessons Learned on Svalbard

28

The Arctic is a region of spectacular and diverse mountain environments. One example is the Svalbard Archipelago in the Norwegian high arctic. Despite its remote location in the Arctic Ocean, Svalbard has an astonishingly diverse economy based on coal mining, arctic research, and the island's geostrategic importance. In recent years, tourism has become increasingly important, with more than a fourfold

increase in tourists from the 1970s to the 1990s. This development poses serious threats to the island's highly vulnerable arctic-alpine environment. A management plan for tourism and outdoor recreation has been prepared in recent years, with a view to safeguarding the unique environment and keeping tourism development within environmentally sustainable and commercially acceptable boundaries.

FIGURE 1. Spitsbergen (northwest coast), one of the world's last wilderness areas. Svalbard has a total area of 63,000 km², of which approximately 50% is covered by glaciers. The environment is arctic-alpine. The major islands contain rugged peaks, the highest of which rise to just above 2,700 m, as well as fjords, broad valleys, and mountainous plains. Average temperatures are higher than at comparable latitudes in the Canadian or Siberian Arctic, and the west coast is free of ice during most of the year. Favorable climatic conditions foster a relatively diverse terrestrial and marine life. Some of the largest seabird colonies in the North Atlantic are found here. Seals and walrus are abundant, as are polar bears, arctic reindeer, and the arctic fox. The vegetation cover varies from polar desert to lush tundra, and 560 species of higher plants have been identified. (Photo by author)
