implementation and practice of EA have been slow despite its growing popularity and interest from all sectors. The author employs sociotechnical theories such as actor network theory ANT and structuration theory ST as lenses to examine and explain why and how challenges and complexities exist and derail the implementation or practice of EA in organisations. By doing so, this serves to enable practitioners and readers to gain fresh insights on why the challenges exist and how they can be addressed in creating collaborative capabilities for business enhancement, sustainability and competitiveness. The book provides detailed insights on how to apply EA for organisational purposes from three main fronts. First, it explains the implications that lack of understanding of EA has on organisational activities and processes. Second, it examines the challenges and complexities that hinder the implementation and practice of EA in organisations. Third, it proposes models and frameworks on how EA can be applied for strategic management of modern IT solutions in organisations. Written for postgraduates, researchers, academics and professionals in the fields of EA, IT and information systems, this book provides a valuable resource that will enable and enhance implementation and practice of EA, including future studies.

High Speed Catamarans and Multihulls Liang Yun, Alan Bliault, Huan Zong Rong, 2018-10-29. High speed catamaran and multihull high speed marine vessels have become very popular in the last two decades. The catamaran has become the vessel of choice for the majority of high speed ferry operators worldwide. There have been significant advances in structural materials and structural design has been combined with higher power density and fuel efficient engines to deliver ferries of increasing size. The multihull has proven itself to be a suitable configuration for active power projection across oceans as well as for coastal patrol and protection operating at high speed for insertion or retrieval with a low energy capability. At present, there is no easily accessible material covering the combination of hydrodynamics, aerodynamics and design issues including structures, powering and propulsion for these vehicles. Coverage in *High Speed Catamarans and Multihulls* includes an introduction to the history, evolution and development of catamarans, followed by a theoretical calculation of wave resistance in shallow and deep water as well as the drag components of the multihull. A discussion of vessel concept design, describing design characteristics, empirical regression for determination of principal dimensions in preliminary design, general arrangement and methods is also included. The book concludes with a discussion of experimental future vehicles currently in development, including the small waterplane twin hull vessels, wave piercing catamarans, planing catamarans, tunnel planing catamarans and other multihull vessels.
