## **Architecture Oriented Otherwise Writing Matters:**

*Architecture Oriented Otherwise* David Leatherbarrow, 2009 So much writing about architecture tends to evaluate it on the basis of its intentions how closely it corresponds to the artistic will of the designer the technical skills of the builder or whether it reflects the spirit of the place and time in which it was built making it not much more than the willful or even subconscious assemblage of objects that result from design and construction techniques Renowned writer and thinker David Leatherbarrow in this groundbreaking new book argues for a richer and more profound but also simpler way of thinking about architecture namely on the basis of how it performs Not simply how it functions but how it acts its manner of existing in the world including its effects on the observers and inhabitants of a building as well as on the landscape that situates it In the process Leatherbarrow transforms our way of discussing buildings from a passive technical or programmatic assessment to a highly active and engaged examination of the lives and performances intended and otherwise of buildings Drawing on an encyclopedic reading of contemporary philosophy as well as from the work of architects whose work he admires including Peter Zumthor Renzo Piano Le Corbusier and Frank Lloyd Wright Leatherbarrow challenges us to fundamentally reconsider the way we think about buildings and ask architects to think about their buildings in a vastly wider context opening up the possibility of creating works that are richer in meaning quality and life In asking for and presenting a sea change in the way of thinking about buildings and their design *Architecture Oriented Otherwise* is required reading for anybody who makes or cares about architecture

**Deep Skin Architecture** Timo Carl, 2019-04-25 Timo Carl presents alternatives to curtain wall facades and other flat boundaries creating autonomous spaces He investigates facade typologies with multiple material layers to strategize the relationship between buildings and their environment By revisiting Le Corbusier's seminal *brise soleil* an alternative reading of the modern project emerges one that is not based on classical compositional rules but instead on the dynamic relationships with environmental forces Finally an exciting series of project based investigations sets out innovative ways in which novel deep skins combine energy conscious performance with the poetics of architecture

Adam Sharr, 2012-11-12 Architecture displays the values involved in its inhabitation construction procurement and design It traces the thinking of the individuals who have participated in it their relationships and their involvement in the cultures where they lived and worked In this way buildings their details and the documents used to make them can be read closely for cultural insights Introducing the idea of reading buildings as cultural artefacts this book presents perceptive readings by eminent writers which demonstrate the power of this approach The chapters show that close readings of architecture and its materials can test commonplace assumptions help architects to appreciate the contexts in which they work and indicate ways to think more astutely about design The readings collected in this innovative and accessible book address buildings specifications and photographs They range in time from the fifteenth century examining the only surviving drawing made by Leon Battista Alberti to the recent past projects completed by Norman Foster in 2006 and Herzog and De Meuron in 2008 They range geographically from France to Puerto Rico to Kazakhstan and they range in fame from buildings celebrated by critics to house extensions and motorway service areas Taken together these essays demonstrate important research methods which yield powerful insights for designers critics and historians and lessons for students **Behind**
