Imaging is crucial in the multidisciplinary approach to head and neck cancer management. The rapid technological development of recent years makes it necessary for all members of the multidisciplinary team to understand the potential applications limitations and advantages of existing and evolving imaging technologies. It is equally important that the radiologist has sufficient clinical background knowledge to understand the clinical significance of imaging findings. This book provides an overview of the findings obtained using different imaging techniques during the evaluation of head and neck neoplasms both before and after therapy. All anatomic areas in the head and neck are covered and the impact of imaging on patient management is discussed in detail. The authors are recognized experts in the field and numerous high quality images are included. This second edition provides information on the latest imaging developments in this area including the application of PET CT and diffusion weighted magnetic resonance imaging.
