When Alan Boye first lived in sustainable housing he was young, idealistic, and not much susceptible to compromise until rattlesnakes, black widow spiders, and loneliness drove him out of the utilities-free yurt he'd built in New Mexico. Thirty-five years later he decided to try again. This time with an idealism tempered by experience and practical considerations, Boye and his wife constructed an off-the-grid, energy-efficient straw bale house in Vermont. *Sustainable Compromises* chronicles these two remarkable attempts to live simply in two disparate American eras. Writing with hard-won authority and humor, Boye takes up the how-to practicalities of building green, from finances to nuts and bolts to strains on friends and family. With *Walden* as a historical and philosophical touchstone and his own experience as a practical guide, he also explores the ethical and environmental concerns that have framed such undertakings from Thoreau's day to our own. A firsthand account of the pleasures and pitfalls of living simply, his book is a deeply informed and engaging reflection on what sustainability really means in personal, communal, ethical, and environmental terms. **Judevine** David Budbill, Dermot McGuigan, Beverly Jacobson, 1999 The long-awaited year 2000 is upon us, and with it comes unprecedented uncertainties related to how computers worldwide will handle the transition in their embedded clocks. How did some of our supposedly brightest technicians inadvertently design the electronic scourge called the Millennium Bug or Y2K? And can Y2K really disrupt the infrastructures that provide us with food, energy, and water? No one knows. This book will lift your spirits by explaining how to be warm and comfortable with sufficient food, water, and electric power to get you through any temporary emergency. It even shows the silver lining of Y2K: the opportunity to re-establish community ties lost in the rush toward globalization. **The New Independent Home** Michael Potts, 1999 Tells the stories of various people who have built their houses in an attempt to get off the grid and make the living spaces as efficient as possible. The author combines the stories of the people and their houses with the principles that make their houses efficient using methods of solar water. Chiras,2002-10-01 Passive solar heating and passive cooling approaches known as natural conditioning provide comfort throughout the year by reducing or eliminating the need for fossil fuel Yet while heat from sunlight and ventilation from breezes is free for the taking few modern architects or builders really understand the principles involved Now Dan Chiras author of the popular book The Natural House brings those principles up to date for a new generation of solar enthusiasts The techniques required to heat and cool a building passively have been used for thousands of years Early societies such as the Native American Anasazis and the ancient Greeks perfected designs that effectively exploited these natural processes The Greeks considered anyone who didn t use passive solar to heat a home to be a barbarian In the United States passive solar architecture experienced a major resurgence of interest in the 1970s in response to crippling oil embargoes With grand enthusiasm but with scant knowledge and sometimes little common sense architects and builders created a wide variety of solar homes Some worked pretty well but looked more like laboratories than houses Others performed poorly overheating in the summer because of excessive or misplaced windows and skylights and growing chilly in the colder months because of insufficient thermal mass and insulation and poor siting In The Solar House Dan Chiras sets the record straight on the vast potential for passive heating and cooling Acknowledging the good intentions of misguided solar designers in the past he highlights certain egregious and entirely avoidable errors More importantly Chiras explains in methodical detail how today s home builders can succeed with solar designs Now that energy efficiency measures including higher levels of insulation and multi layered glazing have become standard it is easier than ever before to create a comfortable and affordable passive solar house that will provide year round comfort in any climate Moreover since modern building materials and airtight construction methods sometimes result in air quality and even toxicity problems Chiras explains state of the art ventilation and filtering techniques that complement the ancient solar strategies of thermal mass and daylighting Chiras also explains the new diagnostic aids available in printed worksheet or software formats allowing readers to generate their own design schemes     **Building with Earth** Paulina Wojciechowska,2001 This book will take you back to

the future of natural building which lies in the merger of ancient architectures with cutting edge earth based techniques now being researched for their potential in building durable dwellings in the Third World off the grid dream homes in exotic locales and even structures on the moon BOOK JACKET      **The Real Goods Independent Builder** Sam Clark, 1996
