How Energy Is Converted

Pretend you are walking along the sidewalk on a warm, sunny spring day in the afternoon. The air is pleasant around you but when you put your hand on the asphalt, you notice it is much warmer, even hot to touch. Why is that? This has to do with the idea that energy can **convert** from one form of energy to another form of energy. The light energy from the sun is captured by the black asphalt and converted into heat energy. Another example of energy conversion happens when you eat food - the energy in food is converted into the energy of the movement you are doing when you are walking, talking or anything else!

- Fill in the blank: energy can _____ from one form of energy to another form of energy.
 - Explode
 - Convert
 - Heat
 - Jump
- In the example in the reading, light energy from the sun is converted into what type of energy that you can feel coming from the asphalt?
 - Heat
 - Light
 - Movement
 - Food
- What do you need to do in order to get more energy to do things like play sports and move around?
 - Run faster
 - Find a battery
 - Sit still
 - Eat
