Efficient Redundancy Design Practices T. M. Palmer, 2003-02-01 The design of wastewater treatment plants with redundancy to assure a quality end product may be in conflict with efforts to assure effectiveness Redundancy of major

system components is to assure compliance with regulations and protection of the environment and the health and safety of the public and treatment plant staff. However, the capital costs and maintenance associated with redundant equipment does not necessarily enhance facility performance. There are a number of forces driving the level of redundancy in plant designs. Federal and state compliance regulations and the design engineer's past experiences will influence the plant design. To some extent, the plant staff may also provide input into the plant design and therefore contributes to the redundancy. This report determines alternative methods to address treatment plant redundancy, including examples of methods currently in place and ideally insight on the premises leading to these applications. A secondary objective is to identify the similarities and differences in redundancy requirements associated with federal and state regulatory agencies. Wastewater Sludge Ludovico Spinosa, 2011-05-05. Following a successful first edition published in 2007, the follow-up 2011 edition of *Wastewater Sludge: A Global Overview of the Current Status and Future Prospects* will present an updated and expanded perspective on developments in relation to wastewater sludge around the world. Sludge arising from wastewater treatment represents a serious environmental issue requiring technological and management solutions to ensure it is processed in a safe and economically efficient manner. Extension of sewers, the construction of new wastewater treatment facilities, and the upgrading of existing wastewater plants means the amount of sludge to be handled continues to increase. Alongside these aspects relating to energy consumption and sustainable operation need to be considered. Within this general picture, sludge is generated in different technical, economic, and social contexts around the world, demanding that different approaches need to be taken. The 2011 edition of this report provides a strategic overview of the wastewater sludge market around the world based on regional and country contributions. These look at the current situation in terms of sludge generation, legislation, technology applied, and management approaches. These will then look at anticipated developments over the short/medium term, including expected developments in terms of legislation and the technology and management solutions to be implemented. These will be complemented by longer-term perspectives also. The report has been prepared for the Market Briefing Series of the International Water Association's magazine *Water21* with input from IWA's network of wastewater sludge experts around the world. Contributions in the 2011 edition include: Western Europe, Portugal, Italy, Belgium, Eastern Europe, Turkey, USA, Canada, Latin America, Caribbean, Colombia, Brazil, East Asia, Korea, Malaysia, South Asia, China, Africa, and Australasia.

Nutrients and Their Impact on the Canadian Environment Patricia A. Chambers, Canada. Agriculture and Agri-Food Canada, Canada. Environment Canada, Canada. Department of Fisheries and Oceans, Canada.
