Matthiessen, Marcus Willaschek, 2013-12-01 Defeasibility most generally speaking means that given some set of conditions A something else B will hold unless or until defeating conditions C apply While the term was introduced into philosophy by legal philosopher H L A Hart in 1949 today the concept of defeasibility is employed in many different areas of philosophy This volume for the first time brings together contributions on defeasibility from epistemology Mikael Janvid Klemens Kappel Hannes Ole Matthiessen Marcus Willaschek Michael Williams legal philosophy Frederick Schauer and ethics and the philosophy of action Claudia Bl ser R Jay Wallace Michael Quante and Katarzyna Paprzycka The volume ends with an extensive bibliography by Michael de Araujo Kurth

several papers relating to deontic logic underlines Hilpinen's importance in that area in which his publications have long been recognized as standard works The book is an essential collection of ideas for all those who feel at home in a variety of formal disciplines from propositional logic to the logic of artificial intelligence Donald Davidson Kirk Ludwig, 2003-07-28

Donald Davidson has been one of the most influential figures on modern analytic philosophy and has made seminal contributions in a wide range of subjects philosophy of language philosophy of action philosophy of mind epistemology metaphysics and the theory of rationality His principal work embodied in a series of landmark essays stretching over nearly 40 years exhibits a unity rare among philosophers contributing on so many diverse fronts This is the only comprehensive introduction to the full range of Davidson's work **Scientific Explanation, Causality, and Agency** Majid D.

Beni, 2024-07-12 This book draws on advances in computational neuroscience and theoretical biology to provide a clear and accessible agentive account of the nature of causality and scientific explanations Instead of attempting to establish the elements of scientific explanation such as causality in a reality unadulterated by a human perspective this book relies on scientific facts about cognition to describe the structure of agency from a distinctly human perspective The book draws on the Free Energy Principle to reinforce the agency theory of causality and extend it to an account of explanation as well This principle not only provides a theoretical account of how self-organising systems engage with the causal structure of the environment but it also offers a viable notion of agency and is compatible with the projectivist aspects of the agency theory

Scientific Explanation Causality and Agency will appeal to researchers and advanced students working in philosophy of science philosophy of cognitive science epistemology computational neuroscience and theoretical biology *Action, Knowledge, and Will* John Hyman, 2015 John Hyman explores central problems in philosophy of action and the theory of knowledge and connects these areas of enquiry in a new way His approach to the dimensions of human action culminates in an original analysis of the relation between knowledge and rational behaviour which provides the foundation for a new theory of knowledge itself **Geist als Ursache?** Markus F. Peschl, Alexander Batthyany, 2008 **Practical Conflicts** Peter

Baumann, Monika Betzler, 2004-01-26 In this collection a distinguished roster of philosophers analyse the diverse forms of practical conflict **Topical Relevance in Argumentation** Douglas Walton, 1982-01-01 It is a longstanding if not altogether coherent tradition of logic and rhetorical studies that an argument can be incorrect or fallacious in virtue of some proposition in it being irrelevant This monograph clarifies that tradition Non-classical propositional calculi including relevance logics and relatedness logics are juxtaposed against conversational criticisms of irrelevance in natural argumentation e.g. in parliamentary debates The object is to see if there is a reasonable way of evaluating criticisms like 'That's beside the point' or 'That's irrelevant' Intentionality, Deliberation and Autonomy Sandro Nannini, 2016-05-23 Many important thinkers in the philosophical tradition like Aristotle or Hume have used an explicit theory of action as the basis of their respective normative theories of practical rationality and morality The idea behind this architecture of theories is that

action theory can inform us about the origin bonds reach and limits of practical reason The aim of this book is to revive this direct connection between action theory and practical philosophy in particular to provide systematic action theoretical underpinnings for the discussion about the normative structure of practical reason This book brings together a collection of specially commissioned essays from internationally prestigious scholars in the field and represents the state of the art in contemporary philosophy of action The book is divided into three parts i conceptual work about what actions intentions and intentional actions are ii empirical theory of practical deliberation and iii theories about the action theoretic features of autonomy The volume significantly advances these three lines of research and offers important new contributions to each of them

Roderick M. Chisholm R. Bogdan, 2013-03-09 The aim of this series is to inform both professional philosophers and a larger readership of social and natural scientists methodologists mathematicians students teachers publishers etc about what is going on who s who and who does what in contemporary philosophy and logic PROFILES is designed to present the research activity and the results of already outstanding personalities and schools and of newly emerging ones in the various fields of philosophy and logic There are many Festschrift volumes dedicated to various philosophers There is the celebrated Library of Living Philosophers edited by P A Schilpp whose format influenced the present enterprise Still they can only cover very little of the contemporary philosophical scene Faced with a tremendous expansion of philosophical information and with an almost frightening division of labor and increasing specialization we need systematic and regular ways of keeping track of what happens in the profession PROFILES is intended to perform such a function Each volume is devoted to one or several philosophers whose views and results are presented and discussed The profiled philosopher s will summarize and review his their own work in the main fields of significant contribution This work will be discussed and evaluated by invited contributors Relevant historical and or biographical data an up to date bibliography with short abstracts of the most important works and whenever possible references to significant reviews and discussions will also be included

Action in Context Anton Leist, 2012-02-13 The book illustrates the concept of action in three different contexts the justification of actions people s life history and pragmatism The special feature of this book is that a comprehensive view of this kind marks a departure from the atomistic approach of action theory which in itself raises a number of questions If actions are not justified by mental states

how can persons then act for reasons How can persons actions over time be described and what is the connection with the question of personal identity If there is to be a unified understanding of the person does the practical have to take precedence over the theoretical and what does this mean for epistemology for example The ten contributors to this volume engage in an instructive manner with these and similar questions in the three sections of the book
