## INTRODUCTION

A flight management system (FMS) or a flight management computer (FMC) is a function module computer that automates a wide variety of in-flight tasks, reducing the workload on the flight crew to the point that during long haul flight operations a pilot who flies on a much go into a comfortable sleep.

A primary function is flight management of the flight plan. Using various sensors such as GPS and IRS to determine the aircraft's current position in the world. The FMS is normally controlled through a Control Display Unit (CDU) which incorporates a small screen and keyboard. The FMS also sends the required flight plan data to other instruments such as the PFD for better awareness.
