A Manual of Morphometry in Diagnostic Pathology J.P. Baak, J. A. Oort, 2012-12-06 J Oort and J P A Baak This manual is written by pathologists and is meant for pathologists It deals with a subject that became especially popular in pathology at the end of the last decade morphometry Morphometry is defined as the quantitative description of a structure Weibel 1969 This structure may be both of macroscopic and micro scopic size Strictly the size of an organ is a morphometric feature This type of morphometry has long been in use in pathology Examples of this type in diagnostic pathology have been given by Roesle and Roulet 1932 In this manual however the term morphometry is used in its re stricted microscopic meaning i e the quantitative description of micro scopic images and features The quantitative analysis of microscopic pic tures has for a long time been subordinated to the qualitative description This may partly have been caused by the preference of the human mirdl for pattern recognition rather than quantitative appraisal which leads to judgements based on impressions subconsciously tested against the ob server s mental image of the normal pattern Another cause may have been the time consuming difficulties of collecting and computing quanti tative information During the past decades the usefulness of quantitative methods in histo and cytopathology has been stressed for many different subjects In addition minicomputers have become widely available and are becoming increasingly inexpensive the more so since the introduction of micro com puters **A Manual of Morphometry in Diagnostic Pathology** J.P. Hearing Loss Richard J. Salvi, D. Henderson, R. P. Hamernik, V. Colletti, 2013-03-09 In September 1985 NATO sponsored an Advanced Study Workshop entitled Noise Induced Hearing Loss Basic and Applied Aspects The meeting was held in a mountain retreat near Lucca Italy and was attended by scientists clinicians and public officials from 12 countries This was the third in a series of such conferences organized by the authors The first two were supported by the United States National Institute of Occupational Safety and Health their proceedings were published as The Effects of Noise on Hearing in 1976 and New Perspectives on Noise Induced Hearing Loss in 1982 The Organizing Committee approached NATO because it was felt that the problem of noise was common to all industrialized countries and was an especially serious problem for the military Thus the NATO sponsorship and the Italian site of the meeting were part of the Organizing Committee's plan to obtain an international and thorough representation on the problem of noise induced hearing loss The NATO meeting and proceedings followed the format of the previous two symposia with an initial focus on the anatomical and physiological disturbances resulting from noise induced hearing loss This was followed by sections devoted to studies of a more applied nature involving general auditory performance in noise issues associated with the establishment of noise exposure criteria nonauditory effects of noise and the interaction of noise with other agents

Soft Tissue Tumors D. Harms, D. Schmidt, 2013-11-11 Soft tissue tumors are a very heterogeneous group of tumors in terms of histogenesis morphology cytogenetics molecular biology clinical manifestation and prognosis Their spectrum is fascinating for morphologists and basic scientists alike Yet precisely this variability in the morphologic manifestation of soft tissue tumors specifically their histologic and cytologic patterns presents great difficulties to any effort to categorize them Although many soft tissue tumors are today defined not only by histology but also by immunohistochemical cytogenetic and molecular biological findings the histogenesis of many soft tissue tumors in particular malignant ones continues to be unknown This is associated with the fact that the actual precursor cells that lead to these tumors have frequently not yet been identified For this reason the customary classification of malignant soft tissue tumors is primarily not histogenetic but actually according to the dominant phenotype however characteristic it is Of course an exact morphologic examination of soft tissue tumors continues to be an essential prerequisite for making a diagnosis and determining a therapy The use of a wide range of additional modern examination techniques however can make a substantial contribution toward more precisely defining the biological behavior of a tumor which without doubt can have therapeutic implications
